UI/UX DESIGN DEVELOPMENT FOR PT. JAYA TEKNIK INDONESIA'S COMPANY PROFILE WEBSITE

While carrying out professional work at PT. Jaya Teknik Indonesia in the IT Support division, practitioners have the opportunity to participate in managing the Odoo ERP system and developing UI/UX design for the company's company profile website. The practice focuses on managing product requests in the Odoo ERP Inventory module and customizing the appearance of the system used by the company. Practitioners are also involved in the data transmigration process between versions of Odoo that are still actively used to ensure data consistency. In UI/UX development, practitioners are responsible for designing a more modern and professional website interface, paying attention to attractive visualization aspects and ease of interaction for users.

Keywords: ERP Odoo, UI/UX, data migration, company profile website
