INCREASING EMPLOYEE PRODUCTIVITY THROUGH IMPROVING THE INVENTORY STORAGE SYSTEM AT PT.XYZ

By carrying the vision of "Success as TOP OF MIND Importer and distributor with the principle of "GLORY", PT XYZ was established in Indonesia since 2011 as a company operating in the distributor sector. Using the name "Brand-XYZ", PT XYZ provides products in the form of machine spare parts in the textile industry including spinpack filters, candle filters / filter cores, contact cleaners. With increasing consumer confidence and demand for other product variants, PT. In line with the company's mission to obtain a turnover of up to 5 billion per month, until August 2024 PT XYZ has successfully opened two branches located in Solo and South Tangerang and 9 market places.

Operational activities on the part of PT XYZ focus on selling inventory in order to generate profits which will become the main source of income for the company. Starting from the process of receiving goods at the warehouse, continued with the placement of goods which is only arranged based on FIFO from the time of receipt, with routine delivery requests being given by the sales team through the Accurate program and marketplace receipts, the operational team at the warehouse is required to work precisely, quickly, and efficient in fulfilling all orders received every day. In this professional work report, the practitioner will present the improvements made to the inventory storage system in the warehouse which were successful in increasing the productivity of direct labor in the warehouse.
