ACCOUNTS RECEIVABLE MANAGEMENT PROCESS WITH THE INTIPAM SYSTEM IN THE SOUTH TANGERANG INVESTMENT DEVELOPMENT COMPANY

Today, the world of work and business is experiencing fierce competition along with the rapid advancement of technology. In the midst of this condition, individual abilities and skills become important for companies. By developing qualified individuals, companies can increase their competitiveness. The Professional Work Program (KP) organized by Pembangunan Jaya University aims to strengthen students' mastery of knowledge and skills before entering the world of work. Practitioners have the opportunity to do Professional Work at Perseroda Pembangunan Investasi Tangerang Selatan (PITS) which is a drinking water management company and is located in Pondok Benda, Pamulang District, South Tangerang City. During the Professional Work, the Practitioner is in charge of inputting new customer connection data, reconciling customer receivable data in the INTIPAM system with bank statement data, and filing daily counter entry documents. Through direct experience in the company, Practicum obtained various valuable lessons and was able to apply the theories that had been learned and deepen the understanding of accounting processes in the real world and the development of social skills. The findings of this KP show that although Practicum faces various obstacles, such as problems with the INTIPAM system and human error, Practicum can find solutions and learn the importance of communication skills and teamwork. In closing, it is recommended that companies continue to improve internal control and information systems, and universities strengthen professional work socialization programs for students.
