### **IMPLEMENTASI KONSEP DESAIN MINIMALIS PADA BANGUNAN**

Professional Work is a form of self-development and character strengthening towards the formation of quality in students who will dive directly into the scope of architectural work. With the development of understanding of style, as creative workers are required to be able to explore themselves and designs that will compete. In this report, the intern will discuss how to implement architectural concepts that carry certain values that are translated into 3D design forms. The application of minimalist design is also often found in middle-class housing, where functionality is key in designing an efficient yet attractive home. Simple shapes, use of open space, and minimal decorative elements are the hallmarks of this design.
