THE ROLE OF THE ACCOUNTING INFORMATION SYSTEMS TO SUPPORT THE OPERATIONAL ACTIVITIES OF THE CLINICAL PUBLIC HEALTH SERVICES (KPKM) RENIJAYA UIN SYARIF HIDAYATULLAH JAKARTA

Accounting Information Systems are used to process corporate financial accounting data, so accounting information can be presented easily, quickly, and accurately. The object of research is KPKM of UIN Pamulang which is engaged in public health services. The research objective was to analyze the accounting information system in clinical operational activities. The results of the study concluded that the UIN Clinic accounting information system was inadequate and ineffective in its application. For this reason, it is necessary to develop a financial accounting information system in stages by considering the increasing number of clinic patients.
