

ABSTRACT

This Professional Work Report is based on the author's firsthand experience during the internship program in the Operational Engineering Division at PT Sumber Jaya Kelola Indonesia, specifically in the units of Pasar Modern and Bintaro Trade Center. These markets represent a synergy between traditional markets and a modern management approach, aiming to enhance their competitiveness amidst the dominance of modern retail. During the internship, the author was involved in various operational activities, including market supervision, preparation of Budget Plans (RAB), coordination with technicians, and financial administrative data management. This experience exposed the intern to real-world challenges such as budget constraints, interdepartmental coordination, and technical data discrepancies. Through these activities, the author not only applied management theories learned in university but also developed essential professional skills such as business communication, problem-solving, and time management. This report highlights the intern's tangible contributions in supporting the modernization of traditional markets through professional and adaptive work practices..

Keywords: Professional Internship, Operational Engineering, Market Management, Work Experience, PT Sumber Jaya Kelola
