

ABSTRACT

Farij Altaf Syah (2019071010)

Dicoding was officially launched on January 5, 2015, with the aim of empowering Indonesian developers to meet the growing demands of an increasingly competitive market. This mission is carried out through four pillars: challenges, events, academy, and jobs. Dicoding strives to fulfill its mission of expanding and developing Indonesia's IT industry ecosystem by training top talents to create excellent technological products that can compete in both local and global markets. During my professional work at Dicoding Indonesia, I participated in the Android application developer learning path, which focused on developing applications that run on the Android platform. The programming languages used were Kotlin and Java. This program also included various activities such as ILT Tech, ILT Soft Skills, and Weekly Consultations.

Keywords : *Kotlin, Java, Dicoding, Certified Independent Study.*
