*This study aims to determine whether there is an influence of a sense of community on social well-being in the management staff of the Ruang Publik Terpadu Ramah Anak (RPTRA). The data for this study were generated from a scale distributed to 290 RPTRA management staff. The scale used to measure the sense of community is the Sense of Community Index 2 (SCI-2) developed by Mc Millan & Chavis. This study also uses Keyes's scale, the social well-being scale to measure social well-being. This study used a simple linear regression analysis and it was found that there was a significant influence of a sense of community on the social well-being in RPTRA management staff, namely 41.3%.*
