*Natural disasters are events that can impact human life. The National Disaster Management Agency (BNPB) shows that most disasters in Indonesia are related to air, such as floods. One region in Indonesia with a high disaster index is Aceh Province. Floods are a recurring disaster in Aceh Province. Disaster resilience is necessary. One theory that focuses on disaster resilience is that individual disaster resilience is needed to be able to process and understand disasters. The method used in this study was quantitative, with 404 adults as respondents. The results showed that adult disaster resilience individuals in Aceh Province were in the moderate category..*
