THE EFFECT OF COVID-19 ON THE RESILIENCE OF THE FOOD SUPPLY CHAIN IN INDONESIA

The impact of the COVID-19 pandemic has disrupted various aspects of life ranging from health, social, economic and various other aspects, in most parts of the world, especially in Indonesia. One of the main issues currently being discussed by the public regarding the impact of the COVID-19 pandemic which is increasingly widespread in the territory of Indonesia is the issue of food supply chain security. This research method uses quantitative data collection methods. Food is a major milestone for the needs of the people not only in Indonesia but throughout the world, therefore meeting the food needs of the community during the COVID-19 pandemic needs special attention from many parties so that the resilience of the national food supply chain is maintained. The authorities must ensure that the entire food supply chain remains active and uninterrupted. There are several food commodities that need to be imported as soon as possible so that food trade restrictions do not occur in several food commodity supply countries.
