

ABSTRACT

Alexander Pandu Febriartha (2016071002)

Analyzing System and Create a Guest Book Website at PT. Ngampooz Pintar Sejahtera.

PT. Ngampooz Pintar Sejahtera is a digital service provider, offering services in the form of seminars, open classes, and other events related to the higher education operations. Despite the large number of company visitors, the company had not provided a facility for the guests to make an appointment with company's staff(s). Concerning this issue, I have been assigned to be directly involved in the process of making a guestbook website for the company, so that guests could easily make appointments with company's staff(s). I was placed in the research and development division. This guestbook website has been created using the Laravel Framework.

Keywords: Website, Laravel, Guest, Company.
