### ***SHEAR WALL IMPLEMENTATION METHOD IN TOKYO RIVERSIDE TOWER 7 APARTMENT PROJECT***

*The internship is a program that provides opportunities for students to get to know, understand, and practice analyzing projects directly in professional world. This internship course is one of the graduation requirements from Universitas Pembangunan Jaya. In this program, students are expected to be able to observe, learn, and be involved in all activities in the field. Thus, students can gain experience and the ability to conclude the knowledge that has been obtained from the field and the theory that has been obtained in the university.*

*We choose the Tokyo Riverside Tower 7 Apartment project with the contractor PT. Pulauintan Bajaperkasa Konstruksi as a place to implement our internship and make our internship reports entitled "Shear Wall Implementation Method on The Tokyo Riverside Tower 7 Apartment Project". The report's data collection was done by observation, field practice, interviews, documentation, and literature review.*

*The result of this internship is we gained knowledge about the method of carrying out shear wall work on the Tokyo Riverside Apartment project starting from the preparation stage to maintenance. Other than that, in approximately 2 months, we got a lot of insight about work in the construction world, trained communication skills, knew how to identify a problem and the solution to the problem, so that this internship program is beneficial for us to strengthen our skills for work later.*
