MAKING MANUAL BOOK AND USER ACCEPTANCE TESTING (UAT) FOR DEMAND APPLICATION AT PT. BHANDA GHARA REKSA

During the application implementation process, there is a creation or tutorial section which has an important part for application developers, designers and application users. In the professional work activities, the practitioner is given the opportunity by PT. Bhandha Ghara Rekza to make User Acceptance Testing (UAT) for the Demand application. In the process of making the Manual book and User Acceptance Testing (UAT), the practitioner communicates and discusses with the Demand application designer who is in the Back End and Front-End sections. Back End and Front End have the main task of designing and creating applications that can support the creation of demand applications. The process of making documents is carried out in several stages, namely: the planning stage, the document creation stage, and the development stage. In the process of making documents, the practitioner uses the Microsoft Word application in making the demand application manual, in making the UAT, the practitioner uses the Excel application to create. Practitioners get some new experiences which are expected to make it easier for the practitioner when he is involved in the world of work. The result of the professional work that the practitioner does is a manual book and UAT for demand applications. It is hoped that the presence of manual books and UAT for Demand applications made by practitioners can make it easier for end users to use Demand applications.
