Several associations and institutions have issued a variety of certifications for engineer. If a engineer has a project management certification, people will expect his performance on managing project will much better. This study aimed to explore how much influence the performance of a certified project management of the human resources especially in construction project management multi-story building. This research found the effect of certification on the performance of engineers before having a certificate and after having a project management certificate. The variable that experienced the biggest increase was the variable of controlling the time of project implementation by 44.83%. While the variable of maintaining and valuing the confidentiality of sensitive information experienced the smallest increase of 13.76%.
