

ABSTRACT

Ryan Maruf Tribuono (2018081013)

DEVELOPMENT OF THE MONITORING AND EVALUATION (MONEV) APPLICATION BACKEND AT UNIVERSITY BUILDING JAYA

While carrying out professional work activities at the Jaya Development University (UPJ), the practitioner works at the University Quality Assurance Institute. In this professional work, the practitioner has the opportunity to work for three months starting from June 14, 2021 to August 31, 2021 with the obligation to build a Website Application to overcome problems at LPMU, namely reporting between work units and study programs during the Monitoring and Evaluation (MONEV) event. The application built by the practitioner must have an important point, namely the website can fill out the task form with a detailed crud and delete it. So that it can make it easier for LPMU to collect problem reports and breakthroughs from work units and study programs at Pembangunan Jaya University. The practitioner uses Code Igniter PHP for making this monitoring and evaluation report website. Based on the results of testing by the job supervisor, the website created by the practitioner is able to meet the achievements and facilitate a work unit in UPJ when the MONEV session takes place.
