Kelurahan Pondok Pinang is one of the areas in South Jakarta with a high enough population so that there is an increasing need, one of which is the need for housing or settlement. The density is also seen from the various activities in Kelurahan Pondok Pinang, which is one of the developing areas from an economic perspective and has adequate facilities to meet the needs of settlements in some areas. But on the other hand, there are still other types of settlements that lack adequate facilities as seen from the width of the road which affects the movement space, social interaction patterns, and local community activities. This research was conducted to analyze patterns of social interaction and economic activity that occurred in densely populated areas in Kelurahan Pondok Pinang through mapping of settlements, surrounding facilities, and community activities supported by the results of interviews with several local residents in Kelurahan Pondok Pinang settlements. So that later it will show results in the form of the impact of population density in an area which affects the movement of the community and patterns of interaction and economic activity

Keywords: interaction, social, activity, economy, settlement, density, population.
