Chinatown is a residential population of which is identical with the activity of its economy. Hear the word Glodok else that comes to mind is the area which is dominated by a row of shops and markets. In its development, Chinatown is a small settlement inhabited by ethnic Chinese in Jakarta. The settlement is built to support their trading activity. As the development time and the space requirement is increasing, slowly Chinatown Glodok developed into a residential area dominated by the economic activity of the local community. This study aims to understand how the activity of the local community, especially the activity of the socio-economic impact on the pattern of the space and the structure of Chinatown. To obtain such information, this study will map the condition of the physical and non-physical as well as doing an interview about the development of the region through informants that have been set. This study shows how the social activities of the economic community of Chinatown Glodok able to encourage and affect the shape of the structure of the spatial region.
