*Convenience is the main factor that makes people want to walk. To increase the public's desire to walk, pedestrian facilities and walkability needs to be implemented well. Wayfinding is one of the most important aspects in increasing the quality of pedestrian facilities. Tactical urbanism is a method that can be used to increase that quality. This research examines the impact of tactical urbanism on walkability and their accordance to 9 Parameters on walkability set by ASEAN Development Bank. This research was conducted mainly around two MRT Jakarta Stations that have been intervened with tactical urbanism. Said locations are near Haji Nawi MRT Station and near Cipete MRT Station. The research is a qualitative descriptive research, with a subjective approach based on user experience. From the research, we can conclude that tactical urbanism increase walkability and the quality of pedestrian facilities around MRT Haji Nawi Station and MRT Cipete Station with wayfinding and shared street between pedestrians and motorized vehicles.*

**Key words:** Urban intervention, Tactical Urbanism, Walkability, Wayfinding
