A payroll information system is one technology that is needed to help the distribution of results (salary) following the work. Universitas Pembangunan Jaya (UPJ) has a Student Ambassador who works to assist the Staff Marketing activities. The payroll system for Student Ambassador does not have accurate accuracy in calculating wages and there is no information related to salary status. The author makes a special payroll information system Student Ambassador which aims to overcome existing problems. Making a system using the OOAD (Object-Oriented Analysis and Design) method by carrying out the objective approach to analyze, design and build systems.

Keywords: Payroll Information System, Payroll, Student Ambassador, OOAD.
