*The development of information technology is one of the biggest impacts on society in finding, spreading, and managing information widely and effectively. In the world of education, teaching and learning activities are the main thing that is done and become the basis for the process of achieving common goals. The use of technology also does not escape in the world of education to support activities and keep up with the times. The task management application becomes a tool for students in the learning process by keeping up with the times and technology. In that case, we need an application that is easy to use and helps achieve goals easily. The user interface is an important part of an application as a liaison for interaction between users and the system. User interface that suits user needs can be the initial goal of the user in using an application. The method used in this research is a mixed method, namely qualitative and quantitative as the data required for designing a user interface design for task management applications.*
