In Indonesia, there are several producing regions, one of which is in East Java Province. East Java is the best marble-producing area in Indonesia, which is located in the southern part of Tulungagung, Tulungagung is the center of the marble industry in Indonesia and the main center is in Campurdarat District where there are many marble industries. This is supported by the availability of raw materials for marble. In these industries, of course, there is a manufacturing process including the stages starting from mining, sawing and polishing the rocks so that they become handicrafts. In the process of processing into a craft, of course, it can cause waste from the results of the pieces.
