BASIS FOR CALCULATION OF GREEN BUILDING ASSESSMENT POINTS AND ITS APPLICATIONS

Implementation of *Kerja Profesi (KP)* is mandatory for students. The purpose of carrying out professional work activities is to increase student insight gained outside the campus and to form superior seeds who are ready to enter the world of work. This program of course also creates a positive relationship between practitioners and institutions. In addition, it can also provide knowledge about the company you want to target. PT Yodaya Hijau Bersatari (YHB) is one of the leading consulting agencies in Indonesia. the company was founded in 2014 with a total of 153 projects currently being undertaken. PT YHB provides services in the form of green building certification, energy simulation, and green awareness. The company's goal is to promote good development in Indonesia through green buildings. Practitioners carry out internships at the company in order to add insight on how to analyze how to achieve green building criteria. In practice, there are 3 different jobs which according to the practitioner are very easy to do. greenship is a standard parameter, especially in Indonesia. There are 6 points that are reviewed in terms of aspects and also with different value weights. In this greenship, especially ASD, it is necessary to choose the right site with the response of public facilities and infrastructure. In addition, for energy efficiency, it can be seen from the type of lamp used and also its relationship to the area of the room. Just like energy efficiency, to achieve artificial ventilation, it is necessary to consider the area and the number of users in the room.
