The Tebet Dalam settlement is different from other Tebet settlements because the residents of communities in the Tebet Dalam settlement area have two (2) different socio-economic groups or groups or are commonly referred to as mixed (heterogeneous) settlements. This study aims to determine how the spatial patterns of heterogeneous settlements are and how the patterns of activity that occur in heterogeneous settlements in the Tebet Dalam settlement. The research method in this study uses descriptive qualitative research methods, namely by making observations and interviews on the research object and then analyzing to answer the problem. The Tebet Dalam settlement has three (3) different types of houses and several educational buildings, places of worship as well as shophouses and offices. The Tebet Dalam settlement has a pattern or contains a space-forming structure with a centered and axis meaning. The settlement pattern of Tebet Dalam is the type of settlement pattern that follows the road and the type of settlement pattern is clustered.

Keywords: Heterogenous, Settlement Pattern, Activity, Qualitative.
