Taman Kota 1 BSD is a green open space located in the heart of BSD City, Tangerang Selatan. City park is a public open space because it has a large enough area, its use is open to the public, and there are activities to do in it. Taman Kota 1 BSD is also included in the category of Green Open Space (RTH) because it is located in urban area and is open to the public. In Taman Kota 1 BSD embedded more than 60 species of trees and there are already more than 2500 trees trunks embedded. Garden city, has many benefits both socially and ecologically. Socially that is a lot of positive activity that was created from all the city park tesebut provide, while ecologically that can gives benefits to the environment as greening and producing oxygen, so the environment feels cool. This study uses a qualitative, i.e. with direct observation to the field to map the existing facilities and what activities done by visitors. This study is expected to provide insight and knowledge to the readers and researchers about the definition, identification, and quality of public space, especially a garden city and as to what activities there are in it.
