Building Facade Design Process in the Pejaten Residential Project

In accordance with the curriculum, Professional Work is a subject that must be followed by students and is also a graduation requirement for the Strata 1 program at Pembangunan Jaya University. This course aims to introduce a real picture or situation in the world of work which may not be obtained in learning activities on campus. On this occasion, the practitioner had the opportunity to carry out professional work activities at a consulting bureau, namely BYTS Architect and work on a residential project in Pejaten. The scope of work carried out by the practitioner is making working drawings of floor plans and processing alternative looks. With this Professional Work activity, it is hoped that the practitioner can adapt in the real world, learn the actual implementation of the design process, and apply the theory and material that has been learned by the practitioner while in lecture. Practitioners contribute in designing the appearance of the Pejaten house, from the 3D modeling stage and also visualization or rendering. The practitioner learns that making a facade is a fairly long process and there are many aspects that must be considered.

Keywords : residential, facade, front view, exterior
