UTILIZATION OF ODOO ERP SYSTEM IN MANAGING PURCHASE AND SALES IN TIRE IMPORT COMPANIES

Technology can bridge and facilitate work within a company, it can be proven and carried out by one of the tire importing companies, PT. Tri Tunggal Rajasa which is a trading company engaged in the sale of vehicle spare parts, especially truck and bus tyre. Due to importing and distributing goods, PT. Tri Tunggal Rajasa uses the Odoo Enterprise Resource Planning (ERP) system to maximize and simplify the recording of transactions and the company's operational activities to be efficient. Utilization of Odoo ERP can generate information from available modules, namely about product requirements that must be ordered to suppliers, distribution of goods or delivery, and sales to customers. With an ERP system that provides purchasing, sales, and inventory modules, it can make it easier for companies to maximize the process of recording transactions and storing documents through an integrated and cloud computing-based system.
