There are many environmental problems, especially in industrial areas and underdeveloped areas. Many companies are not responsible for activities that harm the surrounding community and the environment. Environmental damage can be the cause of natural disasters. To determine the effect of CSR (Corporate Social Responsibility), SR (Sustainability Report) and GCG (Good Corporate Governance) on financial performance, this research is specifically directed to the use of the case study method. This study uses a quantitative approach because the data obtained by the author is based on data and information collection. Based on the results of statistical processing, it shows that there is a significant effect (X1) CSR, (X2) SR and (X3) GCG on (Y) Financial Performance and there is a simultaneous effect of (X1), (X2) and (X3) on (Y) . For further researchers, it is expected to conduct research in other company sectors, not limited to manufacturing, mining and service companies. expand the research sample, so that the research results will be more accurate. Using other measurements other than the disclosure of financial statements related to the disclosure of the Sustainability Report.

Keywords: CSR (Corporate Social Responsibility), SR (Sustainability Report), GCG (Good Corporate Governance), Financial Performance, Environmental Accounting.
