Jakarta has given birth to many instagramable places with the type of public space for all people. One of them is Skywalk Senayan Park, which officially opened on December 20, 2021, and has become a tourist spot of choice for Jakarta residents. Skywalk Senayan Park is still part of the Senayan Park shopping center which is located on Jalan Pintu Pemuda, more precisely opposite the Gelora Bung Karno (GBK) complex, Central Jakarta. Skywalk Senayan Park is one of the physical forms of the third space (third place), and is an option for the surrounding community to escape from home (first place) or work (second place). Third place itself has a character that is easy to access, not bound by rules, anyone is allowed to enter, a relaxed atmosphere to exchange ideas and interact. Therefore, the author uses the Third Place theory to analyze the characteristics of the third place at Skywalk Senayan Park, and the public space theory as an approach to answer the issues and questions that exist in the goals and problems. The methods used in data collection are observation methods, documentation/literature studies, and questionnaires that are useful as research targets.

Keywords : third place, public space, interaction.
