*First Aid is an important thing for children to know in order to develop survival skills. The design of this book aims to be a medium for improving medical education by telling interactive pages on book design to get to know and learn about first aid kits in an accident (P3K) in a fun way. First aid itself is a quick, temporary and simple step with a minimum of not using professional medical equipment that can be done at home. The subjects in this study were children aged three to six years, who generally were the age most in need of first aid kits at home.*
