The menu ordering system at the cafe k20 is currently still using the usual way of ordering food or drinks starting from the customer coming, going straight to the cashier to order and then sitting down and the food delivered. When the food runs out, the customer is required to return to the cashier to reorder the food they want to buy, this makes some people lazy to order again. The method used is the RAD (Rapid Application Development) system, a incremental software development process modelss modelterm processing times. The use of a food ordering system to facilitate the work process in a k20 café with a web-based ordering system at a k20 café that can be used with an android mobile as a way of breaking direct coto break
