The emergence of humanitarian conflicts in this world is triggered by nothing but the qualities of arrogance and egoism by humans towards other human beings, certain groups against other groups, even one country against another. Of course, as the Indonesian nation must uphold justice for all Indonesian people in accordance with the 5th Pancasila. Speaking of conflict problems we will enter into a dimension of space decorated with warfare, destruction and on the basis of the goal of achieving victory or glory by a certain side. Researchers conducted a study to find out how the framing carried out by the two media was related to the reporting of cases of attacks on health workers in Papua on the Kabarpapua.co and Kompas.com media in the September 2021 period using the Zongdang Pan & Gerald M. Kosicki framing method. Result results of this study show that the news portal Kabarpapua.co emphasizes what is actually happening in the field while the Kompas.com emphasizes the responses of people who care about this conflict. Of course, the two media have different framings in loading a news story related to the case.
