Communication is an important thing in social life to fellow living beings. One way to communicate with other living things is by speaking. Speaking is a form of language that uses words that are made into a sentence to convey meaning to others. However, in human development, not all have good speech development, as in some cases that occur at an early age or childhood. Problems with speaking cases that occur in children can potentially cause speech delay. Speech delay is a disorder that occurs in speaking activities which results in delays in speaking, speaking and expressing desires. Speech delay has a negative impact on the learning process. In dealing with speech delay cases, interactive books can be one way that can be used for speech delay sufferers. The use of this interactive book can make children and parents play an active role in the child's learning process. This interactive book is intended for children with speech delay aged 3-4 years. This interactive book can make children more interested in the learning process and not feel bored. In addition, interactive books make children distracted from gadgets, besides that children become smarter because this interactive book is designed to stimulate children's fine and gross motor skills, another thing is to increase interest in reading in children. This interactive book is designed with the characteristic of using the participation type.
