Design and Development of Features on MBKM Applications of Pembangunan Jaya University

While carrying out internship at the ICT division of Pembangunan Jaya University, the student works under the supervision of the Head of the ICT Department and a mentor. The ICT division of Pembangunan Jaya University, especially the Software Development division, uses technology including PHP as a programming language with the Code Igniter 3 framework. In this internship, the student have the opportunity to participate in developing features on the MBKM applications. The student have tasks including developing existing and non-existent features such as adding the Research and Entrepreneurship registration feature, adding past history features related to the student's activities, adding new features at several user levels, or creating new functions.

Kata Kunci : *PHP, internship, Code Igniter 3, framework, developing feature, creating feature, MBKM, programming language, function.*
