APPLICATION OF SYSTEM APPLICATIONS AND PRODUCTS (SAP) RECEIVABLES AT PT BUMI SERPONG DAMAI TBK.

The purpose of Professional Work for Practitioners is to prepare themselves to face the world of work, gain new experiences, and add wider knowledge and insight so that the skills and abilities of the Practitioners can improve in the world of work in accordance with their field. PT Bumi Serpong Damai Tbk is a company engaged in property and real estate. During the implementation of Professional Work at the company, the practitioner is placed in the finance division and is directly supervised by the Head of the Finance and Accounts Receivable Section. In this finance division, the practitioner is given the opportunity to be directly involved in the process of inputting transactions for the payment of the company's accounts receivable using System Applications Products (SAP). SAP is a system that is used to support activities or activities within a company or organization automatically in order to increase productivity in the company efficiently. SAP is also an enterprise resource planning software (Enterprise Resource Planning or ERP). ERP itself is a software application system that can help companies manage their business. By using this system, Practitioners get the opportunity to learn and understand the transaction input process for the payment of trade receivables or other income. In addition, Practitioners are also given the opportunity to be able to enter customer data, print Daily Income Reports, and view accounts receivable cards through the company's Master Unit system.
