***The method of performing the top structural work on a single multistory residence project***

*Construction in Indonesia continues to grow rapidly as one apartment houses more than two floors. Buildings are structured, as structural planning aims to produce a structure that is stable, strong, durable and meets goals such as economics and easier to implement.*

*Practice selecting a single-story residence project with a steel island polygamarmy construction projectress asa place to perform professional work. During the work of this profession, practice opportunities to participate and engage directly in monitoring of the upper structural work, such as columns, beams, and floor plates.*

*The problem and problem of the project is not able to do the work ahead of 10 o'clock the solution is to maximize the work done before 10 o'clock, the delay of the material supply of order order from day to day and plan the arrival time of the custom-made schedule, The lack of awareness that workers use the self-protection is a solution to reminding workers before starting their work on both apds and those already working should be reprimanded.*

*Key words: structure, slump test, concrete pressure test*
