CONTENT DELIVERY MANAGEMENT SYSTEM DESIGN AT PT. AMAAN INDONESIA SEJAHTERA USING GIT-BASED CMS

Carrying out professional work at PT. AMAAN Indonesia, Practitioners works under the supervision and guidance of the Head of Product. During the internship period, the practitioner works and is directly involved in the activity of making applications at PT. AMAAN Indonesia starts from determining the technology used and the architecture used in the development of the Content Management System by applying the learning outcomes obtained from the Software Engineering course. In his daily life, Practitioners do a lot of application development needed from content arrangement and placement to interface distribution, and coding. Every day a checkpoint is carried out to see the progress of the CMS development by holding daily meetings.
