ASCC 2022

The 13th Asian Control Conference (Hybrid Style)

May 4-7, 2022 (Wed~Sat) International Convention Center, Jeju Island, Korea

<http://ascc2022.org>

Advisory Committee

Etsujiro Shimemura, Japan
Wook Hyun Kwon, Korea
Hidenori Kimura, Japan (ACA 1st President)
Hyungsuck Cho, Korea (2nd President)
Yugeng Xi, China (3rd President)
Li Chen Fu, Taiwan (4th President)
Sangchul Won, Korea (5th President)
Tong Heng Lee, Singapore (6th President)
Takeshi Mizuno, Japan (7th President)
Ljubo Vlacic, Australia

General Chairs

Keum-Shik Hong, Korea
Shuzhi Sam Ge, Singapore
Fumitoshi Matsuno, Japan
Shaoyuan Li, China

Organizing Chair

H. Jin Kim (Seoul National U.), Korea

Program Committee

Chang-Sei Kim (Chonnam Nat. U., Chair)
Changsung Ahn (Pusan National Univ.)
Hyo-Sung Ahn (GIST)
Kyung Kwan Ahn (Ulsan Univ.)
Juhoon Back (Kwangwoon Univ.)
Kyu-Jin Cho (Seoul National Univ.)
Takahiro Endo (Kyoto Univ., Japan)
Sangrok Jin (Pusan National Univ.)
Seul Jung (Chungnam National Univ.)
Ho-Chan Kim (Jeju National Univ.)
Kyung-Soo Kim (KAIST)
Woojin Kim (ETRI)
Kyungchul Kong (KAIST)
Won Gu Lee (Kyung Hee Univ.)
Hyungbo Shim (Seoul National Univ.)
Jongho Shin (Chungbuk National Univ.)
Insoon Yang (Seoul National Univ.)
Kyongsu Yi (Seoul National Univ.)
Seung-Joon Yi (Pusan National Univ.)

ACA Steering Committee (alphabetical)

Mohd Rizal Arshad, Malaysia
David Banjerdpongchai, Thailand (former)
Aamer Iqbal Bhatti, Pakistan
John-John Cabibihan, Qatar
Lei Guo, China (ACA President-Elect)
Mehmet Onder Efe, Turkey
Jih-Gau Juang, Taiwan
Chul-Goo Kang, Korea
Takatoshi Kawabe, Japan
Waree Kongpraveechon, Thailand
Shiro Mazuda, Japan
Yul Yunazwin Nazaruddin, Indonesia
Radhakant Padhi, India
PooGyeon Park, Korea (General Secretary)
Ian Petersen, Australia (former ACA VP)
Li Qiu, Hong Kong (ACA VP)
Mitsushi Sampei, Japan (ACA VP)
Victor Sreeram, Australia (ACA VP)
Masoud Shafiee, Iran (former)
Chu Duc Trinh, Vietnam
Liuping Wang, Australia
Jia-Yush Yen, Taiwan (ACA VP)
Jun Zhao, China
Yanlong Zhao, China

The 13th Asian Control Conference (ASCC 2022) will be held in a hybrid style in Jeju Island, Korea. As a main event of the Asian Control Association (ACA), ASCC provides researchers, engineers, and professionals worldwide with excellent opportunities to get together, exchange new findings and views, and discuss state-of-the-art technologies. ASCC 2022 will feature plenary talks, tutorials, peer reviewed regular and position/industrial papers, workshops, and exhibits. The past ASCCs include Tokyo (1994, the 1st), Seoul (1997), Shanghai (2000), Singapore (2002), Melbourne (2004), Bali (2006), Hong Kong (2009), Kaohsiung (2011), Istanbul (2013), Kota Kinabalu (2015), Gold Coast (2017), and Kitakyushu (2019).

Paper submission <http://sigongji.ascc2022.org>

Key Dates

Regular paper submission	December 31, 2021 → January 20, 2022
Organized session/position papers	January 31, 2022
Decision notification	February 18, 2022
Final camera-ready paper submission	March 18, 2022
Early-bird registration close	April 8, 2022

Plenary Speakers

Prof. Hajime Asama
(IFAC President, F-IEEE, F-JSME, F-RSJ)
The University of Tokyo, Japan

Prof. Robert Bitmead
(IEEE CSS Past-President, F-IEEE)
University of California at San Diego, USA

Prof. Lei Guo
(F-IEEE, F-IFAC, F-TWAS)
Chinese Academy of Science, China

Prof. Shuzhi Sam Ge
(F-IEEE, F-IFAC, F-IET)
National Univ. of Singapore
Singapore

Prof. Jay H. Lee
(F-IEEE, F-IFAC, F-AICHE)
KAIST, Korea

Prof. Huei Peng
(F-ASME, F-SAE, R. L. McCarthy
Professor)
University of Michigan, USA

ASCC 2022 will be held in parallel with **the 9th International Electric Vehicle Expo (IEVE)**, <http://www.ievexpo.org>. In this expo, emerging new techniques on electric vehicles, unmanned and autonomous technologies, and innovative research directions will be exhibited. ASCC attendees will be given a free access to IEVE.

International Program Committee (alphabetical order of last names)

Choon Ki Ahn (Korea Univ., Korea)
 Kyung Kwan Ahn (Univ. of Ulsan, Korea)
 Jinung An (DGIST, Korea)
 Marcelo H. Ang (National Univ. of Singapore, Singapore)
 Shinya Aoi (Kyoto University, Japan)
 Fumihiro Arai (Nagoya University, Japan)
 Ryo Ariizumi (Nagoya University, Japan)
 Shun-ichi Azuma (Nagoya Univ., Japan)
 Joonbum Bae (UNIST, Korea)
 Hyochoong Bang (KAIST, Korea)
 David Banjerdpengchai (Chulalongkorn Univ., Thailand)
 Wenjian Bi (Peking University, China)
 Xuhui Bu (Henan Polytechnic University, China)
 Xinye Cai (Nanjing Univ. of Aeronautics and Astronautics, China)
 Weihua Cao (China University of Geosciences, China)
 Dong Hyuk Cha (Korea Polytechnic Univ., Korea)
 Kosin Chamnongthai (KMUTT, Thailand)
 Dong Eui Chang (KAIST, Korea)
 Xiao-Heng Chang (Bohai University, China)
 Haiyong Chen (Hebei University of Technology, China)
 He Chen (Hebei University of Technology, China)
 Luefeng Chen (China University of Geoscience, China)
 Jun Cheng (Hubei Univ. for Nationalities, China)
 Min-Sen Chiu (National Univ. of Singapore, Singapore)
 Youngchae Cho (Seoul National Univ., Korea)
 Byung-Jae Choi (Daegu University, Korea)
 Hyouk Ryeo Choi (Sungkyunkwan Univ., Korea)
 Jae Weon Choi (Pusan National Univ., Korea)
 Fei Chu (China Univ. of Mining and Technology, China)
 Chung Choo Chung (Hanyang Univ., Korea)
 Mingcong Deng (Tokyo Univ. of Agriculture and Technology, Japan)
 Feng Ding (Jiangnan University, China)
 Jinliang Ding (Northeastern University, China)
 Jiaxiang Dong (Northeastern Univ., China)
 Junping Du (Beijing Univ. of Sci. and Tech., China)
 Guangren Duan (Harbin Inst. of Tech., China)
 Nguyen Dung (Vietnam Academy of Science, Vietnam)
 Yoshio Ebihara (Kyushu University, Japan)
 Takahiro Endo (Kyoto Univ., Japan)
 Yongsoon Eun (DGIST, Korea)
 Chongrong Fang (Shanghai Jiao Tong University, China)
 Jin Guo (Univ. of Science and Technology Beijing, China)
 Soohee Han (POSTECH, Korea)
 Sung Hyun Han (Kyungnam University, Korea)
 Zhongyang Han (Dalian University of Technology, China)
 Wei He (Univ. of Sci & Tech, Beijing, China)
 Xiao He (Tsinghua University, China)
 Xingkang He (Univ. of Notre Dame, USA)
 Tomohisa Hayakawa (Tokyo Institute of Technology, Japan)
 Defeng He (Zhejiang University of Technology, China)
 Wangli He (East China Univ. of Science and Technology, China)
 Tomomichi Hagiwara (Kyoto University, Japan)
 Yasuhisa Hirata (Tohoku University, Japan)
 Bin Hu (Old Dominion Univ., USA)
 Changchun Hua (Yanshan Univ., China)
 Pilwon Hur (Texas A&M Univ., USA)
 Masato Ishikawa (Osaka Univ., Japan)
 Hiroshi Ito (Kyushu Inst. of Tech., Japan)
 Gyu-In Jee (Konkuk Univ., Korea)
 Jae Wook Jeon (Sungkyunkwan Univ., Korea)
 Yingmin Jia (Beihang Univ., China)
 Bin Jiang (Nanjing Univ. Aeronautics & Astronautics, China)
 Maolin Jin (Korea Institute of Robotics & Technology, Korea)
 Kang-Hyun Jo (University of Ulsan, Korea)
 Endra Joelianto (Bandung Institute of Technology, Indonesia)
 Niket S. Kaisare (Indian Institute of Tech. Madras, India)
 Mathiyalagan Kalidass (Bharathiar Univ., India)
 Sungchul Kang (KIST, Korea)
 Hamid Reza Karimi (Politecnico di Milano, Italy)
 Kenji Kashima (Kyoto Univ., Japan)
 M. Jawad Khan (National Univ. of Science and Tech., Pakistan)
 Swanand Khare (Anhui University, China)
 Arkadij Kim (Russian Academy of Sciences, Russia)
 Chang-Seok Kim (Pusan National Univ., Korea)
 Changwon Kim (Pukyung National University, Korea)
 Daeeun Kim (Yonsei Univ., Korea)
 Gon-Woo Kim (Chungbuk National Univ., Korea)
 Ho-Kyung Kim (Pusan National Univ., Korea)
 Euntai Kim (Yonsei Univ., Korea)

Jong-Han Kim (Inha University, Korea)
 Jung Hoon Kim (POSTECH, Korea)
 Jongrae Kim (Univ. of Leeds, UK)
 Kyeong-Hwa Kim (Seoul Nat'l Univ. of Sci. & Tech., Korea)
 Min Young Kim (Kyungpook Nat'l Univ., Korea)
 Hyoeng-Geun Kim (Incheon National Univ., Korea)
 Tohru Kamiya (Kyushu Institute of Technology, Japan)
 Hyoungseop Kim (Kyushu Inst. of Tech., Japan)
 Seungkeun Kim (Chungnam Nat'l Univ., Korea)
 Seung Jae Lee (Seoul Nat'l. Univ. of Science & Technology, Korea)
 Seungchul Kim (Pusan National Univ. Korea)
 Sung-Phil Kim (UNIST, Korea)
 Wonhee Kim (Chung-Ang Univ., Korea)
 Woojin Kim (ETRI, Korea)
 Yeoneung Kim (Seoul National Univ., Korea)
 Nak Yong Ko (Chosun Univ., Korea)
 Kiminaga Kogiso (The Univ. of Electro-Communications, Japan)
 Shunsuke Kudoh (Univ. of Electro-Communications, Japan)
 Ohmin Kwon (Chungbuk National University, Korea)
 Cheolhyeon Kwon (UNIST, Korea)
 Doa Yong Lee (KAIST, Korea)
 Suk Lee (Pusan Nat'l Univ., Korea)
 Jay H. Lee (KAIST, Korea)
 Chang-Hun Lee (KAIST, Korea)
 Choon-Young Lee (Kyungpook Nat'l Univ., Korea)
 Dongjun Lee (Seoul National Univ., Korea)
 Hyeonbeom Lee (Kyungpook National Univ., Korea)
 Jong Min Lee (Seoul National Univ., Korea)
 Joo-Ho Lee (Ritsumeikan Univ., Japan)
 Min Cheol Lee (Pusan National Univ. Korea)
 Moon Yong Lee (Yeungnam Univ., Korea)
 Sangmoon Lee (Kyungpook National Univ., Korea)
 Sangyoon Lee (Konkuk Univ., Korea)
 Se Han Lee (Kyungnam National Univ., Korea)
 Seung Jae Lee (Seoul Nat'l Univ. Sci & Tech., Korea)
 Young Il Lee (Seoul Nat'l Univ. Sci & Tech., Korea)
 Young Jae Lee (Konkuk Univ., Korea)
 Jinlong Lei (Tongji University, China)
 Dewei Li (Shanghai Jiao Tong University, China)
 Donghai Li (Tsinghua Univ., China)
 Dongyu Li (Beihang University, China)
 Hongyi Li (Guangdong University of Technology, China)
 Huiping Li (Northwestern Polytechnical University, China)
 Xianwei Li (Shanghai Jiao Tong University, China)
 Xiaodi Li (Shandong Normal University, China)
 Yuanlong Li (Shanghai Jiao Tong University, China)
 Der-Cheng Liaw (National Chiao Tung Univ., Taiwan)
 Myo Taeg Lim (Korea Univ., Korea)
 Mei Liu (Tianjin University, China)
 Shuai Liu (Shandong University, China)
 Zhijie Liu (University of Science and Technology Beijing, China)
 Zhanga Liu (Northwestern Polytechnical Univ., China)
 Evgeni Magid (Kazan Federal University, Russia)
 Deyuan Meng (Beihang University, China)
 Jun Moon (Hanyang University, Korea)
 Yoshifumi Morita (Nagoya Inst. of Tech., Japan)
 Hyun Myung (KAIST, Korea)
 Masaaki Nagahara (The University of Kitakyushu, Japan)
 Hiroaki Nakanishi (Kyoto University, Japan)
 Nobuaki Nakazawa (Gunma Univ., Japan)
 Noman Naseer (Air University, Pakistan)
 Toru Narnerikawa (Keio University, Japan)
 Quang Hieu Ngo (Can Tho Univ., Vietnam)
 Quoc Chi Nguyen (Ho Chi Minh City Univ. of Tech., Vietnam)
 Yoshimasa Ochi (Nat'l Defense Academy, Japan)
 Yoshito Ohta (Kyoto Univ., Japan)
 Yasuaki Oishi (Nanzan University, Japan)
 Takeshi Oishi (Univ. of Tokyo, Japan)
 Hyondong Oh (UNIST, Korea)
 Yoshihiro Ohnishi (Ehime University, Japan)
 Tianhong Pan (Anhui University, China)
 Chan Gook Park (Seoul Nat'l Univ., Korea)
 Jaehyeung Park (Seoul National Univ., Korea)
 Jong Hyeon Park (Hanyang Univ., Korea)
 Ju Hyun Park (Yeungnam Univ., Korea)
 Kyi Hwan Park (GIST, Korea)
 Sangdeok Park (KITECH, Korea)
 Youngjin Park (KAIST, Korea)
 Muhammad Rehan (Pakistan Inst. of Eng. & Tech., Pakistan)

Yohei Saika (Gunma Nat'l College of Tech., Japan)
 Hideki Sano (Kobe University, Japan)
 Minoru Sasaki (Gifu University, Japan)
 Atsushi Satoh (Iwate University, Japan)
 Tetsuo Sawaragi (Kyoto University, Japan)
 Umer Hameed Shah (Ajman University, UAE)
 Tielong Shen (Sophia Univ., Japan)
 William Singhose (Georgia Inst. of Tech., USA)
 Jae-Bok Song (Korea Univ., Korea)
 Kai-Tai Song (National Chiao Tung Univ., Taiwan)
 Kang Song (Tianjin University, China)
 Won-Kyung Song (National Rehabilitation Center, Korea)
 Toshiharu Sugie (Kyoto Univ., Japan)
 Young Soo Suh (Univ. of Ulsan, Korea)
 Jian Sun (Beijing Institute of Technology, China)
 Ning Sun (Nankai Univ., China)
 Sangkyung Sung (Konkuk Univ., Korea)
 Jackrit Suthakorn (Mahidol University, Thailand)
 Mikhail Svinin (Ritsumeikan University, Japan)
 Yoshihiko Takahashi (Kanagawa Inst. of Tech., Japan)
 Kenjiro Tadakuma (Tohoku Univ., Japan)
 Tua Agustinus Tamba (Parahyangan Catholic Univ., Indonesia)
 Ying Tan (Univ. of Melbourne, Australia)
 Yoshihira Tanaka (Nagoya Institute of Technology, Japan)
 Yang Tang (East China Univ. of Sci. & Tech)
 Vittaya Tipsuwanporn (King Mongkut's Inst. of Tech., Thailand)
 Bambang Riyanto Trilaksana (Bandung Institute Tech., Indonesia)
 Ching Chin Tsai (National Chung-Hsing University, Taiwan)
 Arjon Turnip (Indonesian Institute of Science, Indonesia)
 Tokuo Tsuji (Kanazawa Univ., Japan)
 Binchang Wang (Shandong Univ., China)
 Gang Wang (Beijing Institute of Technology, China)
 Lin Wang (Shanghai Jiao Tong University, China)
 Sheng-Guo Wang (UNC Charlotte, USA)
 Ting Wang (Univ. of Science and Technology Beijing, China)
 Wei Wang (Dalian Univ. of Technology, China)
 Manop Wongsauswan (Chulalongkorn Univ., Thailand)
 Augie Widjoyeritmo (Bandung Inst. of Tech., Indonesia)
 Zheng-Guang Wu (Zhejiang Univ., China)
 Yuhu Wu (Dalian University of Technology, China)
 Fuchun Sun (Tsinghua Univ., China)
 Xiangpeng Xie (Nanjing Univ. of Posts & Telecom., China)
 Fuguo Xu (Tokyo City University, Japan)
 Yong Xu (Guangdong University of Technology, China)
 Yong Xu (Beijing Institute of Technology, China)
 Sendren Sheng-Dong Xu (Nat'l Taiwan Univ. of Science, Taiwan)
 Shibei Xue (Shanghai Jiao Tong University, China)
 Wenchao Xue (Chinese Academy of Science, China)
 Kou Yamada (Gunma University, Japan)
 Yoji Yamada (Nagoya Univ., Japan)
 Teruo Yamaguchi (Kumamoto Univ., Japan)
 Toru Yamamoto (Hiroshima University, Japan)
 Guang-Hong Yang (Northeastern Univ., China)
 Soon Yong Yang (Univ. of Ulsan, Korea)
 Sooyeon Yi (Seoul Nat'l Univ. Tech., Korea)
 Xiang Yin (Shanghai Jiao Tong University, China)
 Jun Yoneyama (Aoyama Gakuin Univ., Japan)
 Ho-Ryong Yoo (Daejin University, Korea)
 Jaehyun Yoo (Sungshin Women's Univ., Korea)
 Sung Jin Yoo (Chung-Ang University, Korea)
 Son-Cheol Yu (POSTECH, Korea)
 Wonpil Yu (ETRI, Korea)
 Jinpeng Yu (Qingdao University, China)
 Dongwon Yun (DGIST, Korea)
 Dan Zhang (Zhejiang University of Technology, China)
 Han Zhang (Shanghai Jiao Tong University, China)
 Yahui Zhang (Yanshan University, China)
 Ding Zhai (Northeastern Univ., China)
 Jifeng Zhang (Chinese Academy of Science, China)
 Xian-Ming Zhang (Swinburne Univ. of Tech., Australia)
 Zhenyong Zhang (Guizhou University, China)
 Dongya Zhao (China University of Petroleum, China)
 Jun Zhai (Dalian University of Technology, China)
 Wenxiao Zhao (Academy of Maths. and Systs. Science, China)
 Zhiqia Zhao (Guangzhou University, China)
 Guangdeng Zong (Qufu Normal Univ., China)
 Xiaofeng Zong (China Univ. of Geoscience, China)
 Tao Zou (Guangzhou University, China)
 Yuan Yuan Zou (Shanghai Jiao Tong University, China)

Jeju Island: A gift from God that shines future's hope beautifully!

The Jeju Island is the only special self-governing province of South Korea. Its area is 1,848 km², its population is about 600,000, and average temperature is 16 °C. It is a very beautiful and relaxing island of nature & myth. Receiving Halla Mountain's spirit and surrounding colors of nature's gift, Jeju Island of unique culture of Tamna raises an anchor towards the Pacific. As a resort and tourist destination, the island was selected as one of **the New 7 Wonders of Nature in 2011**. Previously, the island was certified by UNESCO Triple Crown in Natural Science as

TABLE OF CONTENTS

On the Peak of the Response of Structured Polytopic Linear Systems	1
<i>Graziano Chesi, Tiantian Shen</i>	
A Matrix Inequality Approach to Guaranteed Cost Control of a Nonlinear Bioreactor.....	20
<i>Tanagorn Jennawasin, Patchrappa Wongchai</i>	
Reduction in Command Generation Time for fNIRS-Based BCI	36
<i>M. N. Afzal Khan, Usman Ghafoor, Dalin Yang, Keum-Shik Hong</i>	
Sleep Stage Classification Using Electroencephalography Via Mel Frequency Cepstral Coefficients	42
<i>Seong-Woo Woo, Min-Kyoung Kang, Bae-Jeong Park, Keum-Shik Hong</i>	
Graph Auto Encoder-Based Operation Performance Assessment Method and Its Application for Complex Industrial Process	48
<i>Lili Hao, Fei Chu, Shuangshuang Liao, Yang Xu, Fuli Wang, Xiaoping Ma</i>	
Operating Performance Assessment of Between-Mode Transitions for Multi-Mode Plant-Wide Process.....	53
<i>Xiaoyu Zou, Liang Hu, Fuli Wang, Yuqing Chang, Jie Pan, Fei Chu</i>	
SCD-CA: Stable Concept Drift Learning Based on Correlation Alignment for Streaming Data Forecasting	59
<i>Ge Yu, Zixiao Zhang, Xi Zhang</i>	
Comparison of Palm Oil Fresh Fruit Bunches (FFB) Ripeness Classification Technique Using Deep Learning Method	64
<i>Nurulaqilla Khamis, Hazlina Selamat, Shuwaibatulislamiah Ghazalli, Nurul Izrin Md Saleh, Nooraini Yusoff</i>	
Machine Learning Prediction of Wellhead Growth in Gas Well During Production Stage	69
<i>Zool Hilmi Ismail, Ahmed Elfakharany, Abdul Rahim Risal</i>	
Reinforcement Learning Based Bi-Stage Control for Semi-Enclosed Berth.....	80
<i>Kun Hu, Weilin Li, Jing Wu, Chengnian Long, Shaoyuan Li</i>	
Model Free Adaptive Integral Sliding Mode Control Based on Disturbance Observer for a Class of SISO Nonlinear Discrete Systems	86
<i>Rui Xia, Dongya Zhao</i>	
Data-Driven Iterative Consensus Control of Distributed Interconnected Systems Based on Sliding Mode Method	92
<i>Dawei Zhang, Dongya Zhao</i>	
ESO-Based Data-Driven Iterative Learning Control with RBFNN for Nonlinear Batch Processes	98
<i>Naseem Ahmad, Shoulin Hao, Tao Liu</i>	
An Input-Mapping Based Online Learning Sliding Mode Control Strategy for Discrete-Time Uncertain Systems.....	104
<i>Yaru Yu, Dewei Li, Yaonan Guan</i>	
Real-Time Multi-Resource Jointed Scheduling of Container Terminals with Uncertainties Using a Reinforcement Learning Approach	110
<i>Renxin Zhong, Kexin Wen, Chilin Fang, Enming Liang</i>	

Data-Based Graphical Modeling with Applications in Data Propagation for Disaster Response	120
<i>Kota Sakazaki, Tielong Shen</i>	
Second-Order Quantized ILC for a Class of Nonlinear Nonaffine Systems	132
<i>Huimin Zhang, Ronghu Chi</i>	
Iterative Learning Control for High Speed Trains with Nonuniform Operation Lengths.....	137
<i>Shuai Gao, Dong Shen</i>	
Prediction of Outlet SO ₂ Concentration Based on a Novel CNN-LSTM Model.....	143
<i>Kun Sun, Xiaohong Yin, Xinli Wang, Lin Cui, Mingjun Shao, Youliang Yu</i>	
Perfect Tracking of Second-Order Hyperbolic Impulsive Linear Distributed Parameter Systems Based on Iterative Learning Control	156
<i>Jing Wu, Xisheng Dai, Senping Tian</i>	
Smart Shoe for Predicting Knee Abduction Moment.....	162
<i>Palawich Giraruchataporn, Kittipong Ekkachai, Pantita Peuchpen, Sura Kijpaiboonwat, Waree Kongprawechnon, Shoichi Hasegawa</i>	
Adaptive Tracking Control of Quadrotor UAV with Electromagnetic Attacks	167
<i>Wei Yue, Yibo Zhao, Liyuan Wang</i>	
Pose-Aware Object Recognition on a Mobile Platform Via Learned Geometric Representations.....	175
<i>Csaba Beleznai, Philipp Ausserlechner, Andreas Kriegler, Wolfgang Pointner</i>	
Modified Adaptive Neural Sliding Mode Control for Active Power Filter	191
<i>Shixi Hou, Shili Fu, Cheng Wang, Jing Wang, Ao Lian, Yundi Chu</i>	
A Stochastic Jump Model for Epidemics with Demography, and Confinement and Vaccination Controls: Safety Zones and Algorithms	197
<i>Dan Goreac, Juan Li, Boxiang Xu</i>	
System Reduction Using Continued Fraction Method to Allow Retention of Dominant Modes.....	203
<i>A. K. Prajapati, S. Mamidala, S. Ravada, C. Mutta</i>	
Dual-Mode Infinite Horizon Constrained Model Predictive Control Parameterized in Terms of Laguerre Polynomials.....	209
<i>C. U. Dogruer</i>	
Stability Condition for a Class of Finite Memory Integral-Model Predictive Control	215
<i>C. U. Dogruer</i>	
Versatile Solutions for the Combine Harvester Header Height Control Problem	221
<i>Robin De Keyser, Isabela Roxana Birs, Dana Copot, Mihaela Ghita, Cristina Ioana Muresan, Clara Mihaela Ionescu</i>	
Enhancing Monitoring Performance of Pharmaceutical Processes Using Dual-Attention Latent Dynamic Conditional State-Space Model	227
<i>Yi Shan Lee, Junghui Chen</i>	
Quadrotor Attitude Control Based on Deep Deterministic Policy Gradient with Hindsight Experience Replay.....	233
<i>Sangmin Lee, Seong-Hun Kim, Hanna Lee, Youdan Kim</i>	
Wavelet Fuzzy Neural Network Super-Twisting Control	239
<i>Juntao Fei, Jie Zhuo</i>	

Control and Simulation Test of an Unmanned Aerial Vehicle	244
<i>Kranthi Kumar Deveerasetty, Kochi Oka, Akinori Harada, Yimin Zhou</i>	
An Improved Unknown Input Observer Design for Fuzzy Bilinear Systems	252
<i>Jun Yoneyama</i>	
Consensus of Input Constrained Linear Multi-Agent Systems by Centralized Event-Triggered Strategy with Directed Networks	263
<i>Meilin Li, Yue Long, Tieshan Li</i>	
Dissipative Analysis for Fractional-Order Complex-Valued Reaction-Diffusion Neural Networks.....	269
<i>Xiangliang Sun, Xiaona Song</i>	
Intermittent Dynamic Event-Triggered Control for Linear System with Quantized Input.....	274
<i>Yang Gu, Mouquan Shen</i>	
Impulsive Pinning Synchronization on Lur'e Dynamical Networks with Hybrid Time-Varying Delays.....	280
<i>Zhihua Wang, Dong Ding, Ze Tang</i>	
State Estimation of Fractional-Order Memristor-Based Neural Networks with Probabilistic Time-Varying Delay	286
<i>Haibo Bao, Jianwei Wu</i>	
Robust Attitude Sampled-Data Control for Flexible Spacecraft Under Randomly Missing Measurements and Attacks.....	292
<i>S. Arunagirinathan, T. Saravananakumar, T. H. Lee</i>	
Analysis of Closed-Loop Inertial Gradient Dynamics	298
<i>Subhransu S. Bhattacharjee, Ian R. Petersen</i>	
On Discrete-Time Partial Averaging.....	306
<i>Hengchang Liu, Zeyu Li, Gijo Sebastian, Ying Tan, Denny Oetomo</i>	
Approximation of Commensurate Fractional-Order Systems Using Colliding Bodies Optimization	312
<i>Chhabindra Nath Singh, Deepak Kumar, Paulson Samuel, Akhilesh Kumar Gupta, Victor Sreeram</i>	
Resonant Finite Control Set Model Predictive Control of Single Phase Boost Rectifier in Stationary Reference Frame.....	316
<i>Junaid Saeed, Liuping Wang, Nuwantha Fernando</i>	
Repetitive Control of EV Battery Charger in Single-Phase Vehicle-To-Grid (V2G) Mode	322
<i>Junaid Saeed, Liuping Wang, Nuwantha Fernando</i>	
Hybrid Time-Energy Optimal Trajectory Planning for Robot Manipulators with Path and Uniform Velocity Constraints	334
<i>Wenchuang Sang, Ning Sun, Chenglin Zhang, Zehao Qiu, Yongchun Fang</i>	
Traffic Information-Based Energy Optimization Algorithm for Parallel Hybrid Electric Vehicles.....	349
<i>Sufan Zhao, Mingxin Kang, Zeyu Chen</i>	
MPC Based Energy Management Strategy with On-Board Parameter Identification	357
<i>Bo Zhang, Fuguo Xu, Tielong Shen</i>	

A Data-Driven Real Time Energy Management Strategy for Fuel Cell Hybrid Vehicle in the Connected Environment	363
<i>Zeyi Wei, Qiang Fu, Mingxin Kang, Yahui Zhang</i>	
Optimal Control Strategy of Connected Vehicles in Urban Environment with Platoon Mechanism	371
<i>Yao Zhang, Jiangyan Zhang, Bin Dong</i>	
Integral Barrier Lyapunov Functions-Based Adaptive Control of Uncertain Nonlinear Systems with Unknown Control Directions and State Constraints.....	376
<i>Jie Zhang, Wanyue Jiang, Shuzhi Sam Ge</i>	
An Improved Security OLSR Protocol Against Black Hole Attack Based on FANET	383
<i>Shanyao Ren, Dongyu Li, Qinglei Hu, Yizhong Liu, Jianwei Liu</i>	
A Time-Synchronized Convergence Property	389
<i>Shang Tong, Ruihang Ji, Dongyu Li, Qinglei Hu</i>	
Adaptive Tracking Control of Nonholonomic Mobile Robots with Input Constraints and Unknown Disturbance.....	396
<i>Zhonghao Zhang, Wanyue Jiang, Shuzhi Sam Ge</i>	
Adaptive Second-Order Fast Nonsingular Terminal Sliding Mode Control for a Tilting Quadcopter.....	403
<i>Ruihang Ji, Dongyu Li, Jie Ma</i>	
Decentralized Robust Control for Internet of Connected Vehicles Against Cyber-Attacks.....	409
<i>Wei Yue, Xiangjun Guo, Zhongchang Liu, Liyuan Wang, Cunming Zou</i>	
Enhanced Password Protection Mechanism for Debug Interface Connection on ECU.....	415
<i>Kyung Su Lee</i>	
Autonomous Landing on Moving Targets Using LiDAR, Camera and IMU Sensor Fusion	419
<i>Hamidreza Raei, Youngjoon Cho, Kyihwan Park</i>	
Kriging Weighting Model of Network RTK for Ground Vehicle on Rainy Day	424
<i>Bu-Gyeom Kim, Changdon Kee</i>	
Localization Method for Missing Information in Autonomous Vehicle Using LSTM and UKF Approaches.....	429
<i>Muhammad Rifqi Rafian Putra, Yolanda Tania Mulyadi, Yul Yunazwin Nazaruddin, Fadillah Adamsyah Maani</i>	
An Effective Local Path Planning Algorithm for Intelligent Vehicle in Complex Environment	435
<i>Chunlai Yan, Cong Xu, Pengxin Tian, Kai Sun</i>	
Gentle Normalization and Translation in Graph Neural Network for Few-Shot Learning	443
<i>Lingchang Kong, Yu Hui, Kaiquan Cai</i>	
Fast Blockwise Matrix-Matrix Multiplication Using AVX and Prefetching on Shared Memory	448
<i>Nwe Zin Oo, Panyayot Chaikan</i>	
An Efficient Face Gender Detector on a CPU with Multi-Perspective Convolution.....	453
<i>Adri Priadana, Muhamad Dwisnanto Putro, Kang-Hyun Jo</i>	
High-Resolution Network with Attention Module for Human Pose Estimation	459
<i>Tien-Dat Tran, Xuan-Thuy Vo, Duy-Linh Nguyen, Kang-Hyun Jo</i>	

Analysis of Rule-Based and Shallow Statistical Models for COVID-19 Cough Detection for a Preliminary Diagnosis	465
<i>Arshia Arif, Eisa Alanazi, Ayesha Zeb, Waqar Shahid Qureshi</i>	
A Novel Robust Variable Selection Algorithm for Multilayer Perceptron.....	470
<i>Yongshi Liu, Runmo Wang, Jianjun Zhao, Kai Sun</i>	
Hybrid-Impulses-Based Control for Exponential Stability of Inertial Delayed Neural Networks Using Average Impulsive Gain Strategy	476
<i>Shiyu Dong, Hong Zhu, Kaibo Shi, Shouming Zhong, Yuping Zhang</i>	
A Variable Selection and Structure Optimization Algorithm for Online Sequence Extreme Learning Machine.....	482
<i>Yadong Zhao, Tao Sun, Jianjun Zhao, Kai Sun</i>	
Reduced Computation for Extreme Learning Machine Based on Cholesky Factorization	488
<i>Ignatius Prasetya Dwi Wibawa, Carmadi Machbub, Arief Syaichu Rohman, Egi Hidayat</i>	
A PV Fault Diagnosis Framework Based on Asynchronous Federated Learning	494
<i>Qi Liu, Bo Yang, Zhaojian Wang, Xinyi Wang, Dafeng Zhu, Xinping Guan</i>	
Longitudinal Aerodynamic Parameters Estimation Using Machine Learning with Neuro Artificial Bee Colony Fusion Algorithm (NABC)	500
<i>Prashant Kumar, Sarvesh Sonkar, Riya Catherine George, Ajoy Kanti Ghosh, Deepu Philip</i>	
Adaptive Finite-Time Synchronization of Memristive Neural Networks with Unknown Parameters Via Sliding Mode Control	506
<i>Jie Gao, Tianyuan Jia, Xiangyong Chen, Feng Zhao</i>	
Adaptive Tracking Differentiator Control for Nonlinear Stochastic Systems	512
<i>Yan-Li Liu, Li-Ying Hao</i>	
Adaptive Fuzzy Cooperative Control for Multiple Non-Affine Nonlinear Leader-Following Systems Under Switching Communication Networks.....	518
<i>Kaihan Xu, Xiaona Yang, Xin Wang, Xian Zhang</i>	
Reachable Set Estimation of Neural Networks with Stochastic Sampled-Data	524
<i>Te Yang, Zhen Wang, Guoliang Chen, Jianwei Xia</i>	
Extended Dissipative Non-Fragile Event-Triggered Control for semi-Markovian Jump Systems with Randomly Occurring Uncertainties	530
<i>Yuzhen Liu, Fang Fang, Jiayu Li, Yajuan Liu</i>	
Event-Triggered Controller for Synchronization of Chaotic Neural Networks Using Clock-Dependent Lyapunov Functionals	536
<i>Seungyong Han, Sangmoon Lee, Ju H. Park</i>	
H_∞ Control of Linear Uncertain Systems with Positivity Constraints	542
<i>Nachuan Yang, Yuzhe Li, Ling Shi</i>	
Output Synchronization of Discrete-Time Heterogeneous Network.....	558
<i>Xin Mao, Dan Wang, Wei Chen, Li Qiu</i>	
Distributed Tube-Based Predictive Control of Vehicle Platoons Via Disturbance Compensation	563
<i>Yanghui Feng, Jianbin Mu, Defeng He</i>	

EID-Based Finite-Time Nonsingular Fast Terminal Sliding Mode Control of Autonomous Farming Vehicle	579
Ting Zhang, Xiaohong Jiao, Yahui Zhang	
A Hybrid Approach for State of Charge Estimation of Lithium-Ion Battery	585
Lin He, Xingwen Hu, Yangyang Wang, Yujiang Wei, Mingwei Wang, Qin Shi	
Energy Management for a Series-Parallel Plug-In Hybrid Electric Truck Based on Reinforcement Learning	590
Zimeng Wang, Jun Xie, Mingxin Kang, Yahui Zhang	
Identification and Evaluation of Blast Furnace Condition Based on Spatio-Temporal Feature Extraction	601
Zheyi Zhang, Weihua Cao, Wenshuo Song, Wenkai Hu, Min Wu	
Rate of Penetration Prediction Using Hybrid Gaussian Process Regression Model with ARD Structure in Geological Drilling Process	607
Xiao Wu, Xuzhi Lai, Jie Hu, Xin Chen, Weihua Cao, Min Wu	
Axial-Torsional Coupled Drill-String Vibration Analysis Based on the Bit-Rock Interaction Model Considering the Drilling Fluid Factor	613
Hengyu Huang, Min Wu, Chengda Lu, Weihua Cao, Xin Chen	
GNG-Based NSGA-III for Deviation Correction Trajectory in Vertical Geological Drilling Process	619
Jiafeng Xu, Xin Chen, Weihua Cao, Min Wu	
Design, Control and Implementation of an Intelligent Material Handling Robot	625
Ning He, Kai Zhang, Jia-Xuan Chen, Shuo-Ji Chen, Yu-Heng Hao	
Multi-Fault Diagnosis of Hydraulic Systems Based on Fully Convolutional Networks	631
Peng Zhang, Wenkai Hu, Weihua Cao, Luefeng Chen, Min Wu	
A Robust Self-Tuning PID-Type Control for Time-Varying Process in the Pharmaceutical Industry.....	637
Mihaela Ghita, Dana Copot, Maria Ghita, Isabela Birs, Cristina Muresan, Robin De Keyser, Clara M. Ionescu	
Tensor Slow Feature Analysis for Monitoring Batch Process.....	643
Jingxiang Liu, Junhui Chen, Guoqing Mu	
A Dynamic Charging Schedule Model for Electric Vehicle Battery Swapping Stations with Multiple Battery Types.....	649
Jiali Wu, Hao Wu, Yong Su, Na Wang, Xia Li, Grantham Kwok Hung Pang	
Patch Variational Autoencoder-Based Industrial Defect Detection	674
Yanqing Yang, Jianxu Mao, Yaonan Wang, Hui Zhang, Xianen Zhou, Yurong Chen	
Fastener Counting Method with an Improved Blendmask	678
Kexin Qi, Qing Zhu, Xianen Zhou, Yaonan Wang, Jia Feng	
MA-UNet++: A Multi-Attention Guided U-Net++ for COVID-19 CT Segmentation.....	682
Kun Liu, Junfei Xie, Mei Chen, Haiyong Chen, Weipeng Liu	
Compact and Efficient Feature Representation for Defect in Hot Rolled Strip steel:A Postion Paper.....	688
Jiaojiao Su, Qiwu Luo, Chunhua Yang	
Machine Learning-Based GPS Multipath Detection Method Using Dual Antennas.....	691
Sanghyun Kim, Jungyun Byun, Kwansik Park	

Active Disturbance Rejection Current Control Strategy of Flyback Inverter Based on Reference Current Feedforward	704
<i>Tianrun Liu, Yunjian Peng, Yeteng Wang</i>	
Distributed Point-To-Point Iterative Learning Control for Nonlinear Multi-Agent Systems	712
<i>Xingding Zhao, Youqing Wang</i>	
Priority-Based Strategy for Multi-Objective Steady-State Optimization in Double-Layer Model Predictive Control.....	720
<i>Haojie Sun, Tao Zou, Jingyang Wang, Zhijia Yang, Hongyu Zheng</i>	
Automated Feature Engineering for Fraud Prediction in Online Credit Loan Services	738
<i>Shengbo Chang, Changqi Wang, Cheng Wang</i>	
Disturbance Observer-Based Robust Speed Control of Autonomous In-Wheel Driven Electric Vehicle	744
<i>Byeonggwan Jang, Seungho Han, Yonghun Kim, Kyung-Soo Kim</i>	
A Routing Method for Ridesharing Service by Applying CPLEX.....	766
<i>Van Manh Tran, Thi Hong Nhan Vu</i>	
Lateral and Roll Vibration Reduction by Using a Semi-Active Magnetorheological Damper in a High Speed Capsule Train.....	808
<i>Jinho Lee, Jungyoul Lim, Wonhee You</i>	
Multiple Imputation Based on Bayesian Principal Component Analysis and Bootstrap.....	817
<i>Ying Liu, Yunchong Li, Long Chen, Jun Zhao, Wei Wang</i>	
Equipment Health State Assessment Based on MIC-XGBoost.....	823
<i>Lingyun Sun, Ningyun Lu, Xianfeng Meng</i>	
Machine Learning-Based Soft Measurement Method in the Dense Process of Hydrometallurgy.....	829
<i>Kang Li, Hualu Zhang, Lianyu Wang, Chenyu Fang</i>	
Deep Learning-Based Unmanned Aerial Vehicle Control with Hand Gesture and Computer Vision	835
<i>Farhat Naseer, Ghufran Ullah, Muhammad Aleem Siddiqui, Muhammad Jawad Khan, Keum-Shik Hong, Noman Naseer</i>	
Unmanned Aerial Vehicle Control by Eye-Tracking Using Computer Vision and Machine Learning	841
<i>Zonaira Munir, Muhammad Aleem Siddiqui, Ghufran Ullah, Muhammad Jawad Khan, Keum-Shik Hong, Noman Naseer</i>	
Performance Analysis of Machine Learning Algorithms for EMG-Based Gestures.....	846
<i>Muhammad Arqum Razzaq, Noman Naseer, Hammad Nazeer, Muhammad Jawad Khan, Keum-Shik Hong, Ghufran Ullah</i>	
EMG Signals Based Gesture Recognition Accuracy Improvement by Machine Learning Classifiers/Algorithms	851
<i>Jamila Akhter, Noman Naseer, Anum Rashid, Muhammad Jawad Khan, Keum-Shik Hong, Ghufran Ullah</i>	
EMG-Based Control of Wheel Chair	857
<i>M Wajahat Sohail Gondal, Noman Naseer, Afzaal Ahmed Khan, Ayesha Salman, Qasim Nisar, Hammad Nazeer, Muhammad Jawad Khan, Usman Ghafoor, Keum-Shik Hong</i>	
LADRC Design Based on Disturbance Response Specification for the Second Order Plant.....	863
<i>Ryo Tanaka, Momoko Toyota, Toa Fujimoto</i>	

Finite-Time Motion Planning of Multi-Agent Systems with Collision Avoidance	869
<i>Yilei Jiang, Dongkun Han</i>	
Sum-Of-Squares Program and Safe Learning on Maximizing the Region of Attraction of Partially Unknown Systems	875
<i>Dongkun Han, Hejun Huang</i>	
Real Time Trajectory Generation of Mars Entry Using Legendre Pseudo-Spectral Method	882
<i>Aparna A J, Shriram Swaminathan, Sreeja S.</i>	
H_∞ Fault Estimator for Parabolic Systems with Time-Varying Delays and Sensor Faults	889
<i>Mathiyalagan Kalidass, Ragul Ravi, Ju H. Park</i>	
Bayes-Optimal Solution for Environmental Prediction Using Human Sensitivity	895
<i>Yohei Saika, Masahiro Nakagawa</i>	
A Singular Perturbation Approach to Adaptive Sliding Mode Control.....	901
<i>Arnold Tshimanga Banza</i>	
Predicting the Motion of the End Effector in a Flexible Interconnected Manipulator with Neural Networks	907
<i>Muhammad Adel, Sabah M. Ahmed, Mohamed Fanni</i>	
Outlier-Robust Constrained State Estimation Via ℓ_1 and Huber Penalization.....	914
<i>Natnael S. Zewge, Jamal Ahmed, Hyochoong Bang</i>	
Event-Based Distributed Filtering with Multiplicative Measurement Noise and Correlated Additive Noises	920
<i>Swapna Challagundla, Shaikshavali Chitraganti, Prashant Wali</i>	
Combination of Elman Neural Network and Kalman Network for Modeling of Batch Distillation Process.....	926
<i>Adi Novitarini Putri, Carmadi Machbub, Egi Muhammad Idris Hidayat</i>	
Total Least Squares Estimation for Motion-Induced Extrinsic Calibration in Multi-Robot Systems	934
<i>Ming Li, Zhiyong Sun</i>	
Control Using Q-Learning for Networked Coordination Games.....	941
<i>Bo Jin, Ming Cao</i>	
Cluster Assignment in Multi-Agent Systems	947
<i>Miel Sharf, Daniel Zelazo</i>	
The H-Property of Line Graphons.....	953
<i>Mohamed-Ali Belabbas, Xudong Chen, Tamer Basar</i>	
An Iterative Method for Inverse Optimal Control	959
<i>Zihao Liang, Wanxin Jin, Shaoshuai Mou</i>	
Constrained Zonotopic Kalman Filtering Based State Estimation Algorithm for Nonlinear System Under Unknown Disturbance	965
<i>Ziyun Wang, Yacong Zhan, Yan Wang</i>	
State Estimation with Differential Privacy Under Scale Enlargement of the Sensor Network	971
<i>Xinqi Yan, Chao Yang</i>	

Sensorless Control of PMSM Via Extended State Interconnected Observer	979
<i>Kang Wu</i>	
Semi-Global Bipartite Consensus for Heterogeneous Multi-Agent Systems with Input Saturation	985
<i>Zhuofan Fu, Zhiyun Zhao</i>	
Terrain-Assisted Navigation of Long-Range AUV Based on Intelligent Particle Filter	991
<i>Xiujun Chai, Yuanlong Li, Lei Qiao</i>	
Discrete Artificial Bee Colony Algorithm for the Distributed Resource Constrained Hybrid Flowshop Problem.....	999
<i>Xin-Rui Tao, Bao-Jiang Wu, Quan-Ke Pan</i>	
Solving Heterogeneous Distributed No-Wait Flow Shop Scheduling Problems by a Cooperative Multi-Objective Algorithm.....	1004
<i>Qingqing Zeng, Junqing Li</i>	
A Knowledge-Driven Ant Colony Algorithm for Solving Order Scheduling Problems	1010
<i>Ying Hou, Xinyu Guo, Honggui Han</i>	
An Improved Artificial Bee Colony Algorithm for Assembly Line Balancing Problem of Electric Vehicle	1016
<i>Zifan Wang, Xinwei Wu, Kaizhou Gao, Hua Jiang</i>	
Robust Multi-Objective Particle Swarm Optimization Algorithm Based on Hybrid Metric.....	1021
<i>Hao Zhou, Yanting Huang, Honggui Han</i>	
Gaussian Process-Assisted Evolutionary Algorithm for Constrained Expensive Multi-Objective Optimization.....	1027
<i>Haofeng Wu, Jinliang Ding, Qingda Chen</i>	
Security Sliding Mode Control for Interval Type-2 Fuzzy Systems Under Hybrid Cyber-Attacks	1033
<i>Yekai Yang, Bei Chen, Kun Xu, Yugang Niu</i>	
Resilient Online Distributed Optimization Algorithm Against Byzantine Attacks	1039
<i>Lili Li, Xi Li, Fei Teng</i>	
New Empirical Path Loss Model for HSR	1045
<i>Selvi Lukman, Yul Yunazwin Nazaruddin, Bo Ai, Endra Joelianto</i>	
Failure-Robust Multi-Robot Tasks Planning Under Linear Temporal Logic Specifications	1052
<i>Feifei Huang, Xiang Yin, Shaoyuan Li</i>	
Predictive Control of Network Control Systems with Unknown Transmission Delay Via LSTM Network.....	1060
<i>Tao Chen, Lei Wang, Zhitao Liu, Hongye Su</i>	
Fractional Order Modeling and Internal Model Control of Dielectric Elastomer Actuator.....	1068
<i>Zhichao Xu, Jundong Wu, Yawu Wang</i>	
Staff Lines Removal Based on Naive Bayesian Model.....	1073
<i>Zhe Xiao, Xin Chen, Li Zhou, Ziying Zhang</i>	
Dynamic Expression Recognition-Based Quantitative Evaluation of Teaching Validity Using Valence-Arousal Emotion Space.....	1079
<i>Min Li, Luefeng Chen, Min Wu, Witold Pedrycz, Kaoru Hirota</i>	

Facial Expression Recognition Based on Multi-Scale Convolutional Vision Transformer.....	1084
<i>Cheng-Shan Jiang, Zhen-Tao Liu</i>	
A Hybrid Model for Photo-Responsive Liquid Crystal Elastomer Actuator.....	1090
<i>Jundong Wu, Yawu Wang, Wenjun Ye, Chun-Yi Su</i>	
Multi-Agent Cooperative Strategy Learning Method Based on Transfer Learning	1095
<i>Beinuo Huang, Xin Chen, Yipu Sun, Wpeng He</i>	
Performance Analysis of Acceleration Estimation Effect on a Cartesian Time-Delayed Controller for a Robot Manipulator	1101
<i>Seul Jung, Joon Woo Lee</i>	
Hybrid Impedance Force Tracking Control of a Robot Manipulator Under Non-Model Dynamics and Nonlinear Uncertainties	1108
<i>Seul Jung, Joon Woo Lee</i>	
Loop Closure Detection with Incremental Proximity Graph and Multi-Words Quantization	1114
<i>Lijun Zhang, Weisheng Yan, Huiping Li, Bufang Li</i>	
Experiment of Cooperative Transportation Using Multi-Robots by Multi-Agent Deep Deterministic Policy Gradient.....	1120
<i>Kazuhi Murata, Kenta Miyazaki, Nobutomo Matsunaga</i>	
Data Augmentation Method Based on Feature Extraction for Improving Classification Performance of CNN	1126
<i>Eun Kyeong Kim, Jin Yong Kim, Baekcheon Kim, Sungshin Kim</i>	
Development of a Finishing Robot System.....	1138
<i>Koichiro Hayashi, Hiroki Murakami</i>	
A Basic Study on Trajectory Accuracy Improvement of Hydraulic Excavator by Learning Control	1143
<i>Kohtaro Kosaka, Takashi Yoshimi, Takeya Izumikawa, Takashi Umeda</i>	
Study on Clothing Classification by Machine Learning for Folding System Using Two Omnidirectional Robots with Single Arm	1148
<i>Tran Thanh Khoa, Takashi Kawamura</i>	
Disturbance Observer-Based Adaptive Fault-Tolerant Control of an Electro-Hydraulic Actuator with Output Constraint	1156
<i>Van Du Phan, Kyoung Kwan Ahn</i>	
Observer-Based Adaptive Fuzzy Controller for Pneumatic Active Suspension with Displacement Constraint and Actuator Failures.....	1161
<i>Cong Minh Ho, Cong Hung Nguyen, Kyoung Kwan Ahn</i>	
Fault-Tolerant Control for a Pump-Controlled Electro-Hydraulic System.....	1167
<i>Hoai-An Trinh, Hoai-Vu-Anh Truong, Kyoung-Kwan Ahn</i>	
A Finite Time Tracking Control for Manipulators Using New Adaptive Fast Terminal Sliding Mode Surface.	1179
<i>Quoc Hung Hoang, Kyoung Kwan Ahn</i>	
Cluster Consensus in Multi-Partitioned Matrix Weighted Graphs	1184
<i>Gopika R., V. Resmi, Rakesh R. Warier</i>	

Matrix-Weighted Consensus Algorithms for Euler-Lagrange Systems	1190
<i>Minh Hoang Trinh, Hieu Minh Nguyen, Quoc Van Tran, Hyo-Sung Ahn</i>	
A Consensus-Based Approach for Economic Dispatch Considering Multiple Fueling Strategy of Electricity Production Sector Over a Smart Grid	1196
<i>Ijaz Ahmed, Muhammad Rehan, Keum-Shik Hong, Abdul Basit</i>	
Formation Specification Control Based on Infinitesimal Sign Rigidity in 3-D Space	1202
<i>Seong-Ho Kwon, Zhiyong Sun, Brian D. O. Anderson, Hyo-Sung Ahn</i>	
Prescribed-Time Bipartite Average Consensus of Multi-Agent Systems with Cooperative-Competitive Interactions	1210
<i>Yue Wu, Shunwei Hu, Xiangyong Chen, Feng Zhao</i>	
Ultrahigh-Speed Stealth Walking on Zero-Friction Floating Island Based on Horizontal and Vertical Ground Reaction Force Control.....	1221
<i>Runyu Liu, Fumihiko Asano, Yanqiu Zheng, Cong Yan</i>	
Water Surface Walking and Gait Efficiency Analysis of Legged Locomotion Robot Equipped with Floats on Feet	1227
<i>Yuetong He, Fumihiko Asano, Yanqiu Zheng, Cong Yan</i>	
Hopf Bifurcation in a Delayed Epidemic Model with Vaccination.....	1246
<i>Toshikazu Kuniya</i>	
Observers for 2×2 Hyperbolic Systems with Coupled Nonlocal Boundary Condition	1250
<i>Hideki Sano</i>	
A Multi-Objective State-Feedback Synthesis for Infinite-Dimensional Systems Based on Linear Operator Inequalities in the Conjugate Space.....	1256
<i>Izumi Masubuchi</i>	
Stabilization of a Wave Equation and a Scalar ODE by a Single Input	1264
<i>Daisuke Tsubakino</i>	
ASPR Based Adaptive Anti-Windup Control for Adaptive Output Feedback Control with PFC and Adaptive Feedforward Input.....	1276
<i>Yongjie Yu, Sadaaki Kunimatsu, Ikuro Mizumoto</i>	
Soft Sensor Unit for Measurement of Large Scale Multi-Axis Force	1290
<i>Eunseok Song, Seongbin An, Hyunjin Choi, Kyoungchul Kong</i>	
Control of Nonlinear Mechatronic Systems with Context-Dependent Varying Dynamics	1296
<i>Isabela Roxana Birs, Clara Mihaela Ionescu, Robin De Keyser, Cosmin Copot, Cristina Ioana Muresan, Bogdan Muresan, Constantin Florin Caruntu</i>	
Optimal Mechanical Design of Half-Car Vehicle Suspension System Components.....	1302
<i>C. U. Dogruer</i>	
A Current Balancing Method of Two-Phase Soft Starter for Three-Phase Induction Motor Drive System Without Current Sensor	1309
<i>Dae-Young Yang, Tae-Hoon Kim, Tae-Ho Oh, Young-Seok Kim, Sang-Hoon Lee, Dong-Il Dan Cho</i>	
Vector Control of IPMSM Used in Electric Vehicles	1317
<i>Hassam Muazzam, Mohamad Khairi Ishak, Athar Hanif, A. I. Bhatti, Nor Ashidi Mat Isa, Muhammad Nasiruddin Mahyuddin</i>	

Adaptive Reference for Idle Speed Control of an SI Engine Using Auxiliary Load Trajectory Prediction	1322
<i>Deepak Mandloi, Alok Kanti Deb</i>	
Precise Missile Autopilot Design Using Nonlinear Sliding Mode Control	1330
<i>Jingxian Liao, Hyochoong Bang</i>	
Revisiting the F-8 Aircraft Control Problem with Dynamic Programming.....	1336
<i>Auralius Manurung, Lisa Kristiana, Niken Syafitri, Nur Uddin</i>	
Prescribed Performance Adaptive Fault-Tolerant Control for a Manipulator	1341
<i>Duc Thien Tran, Thien Quang Nguyen</i>	
Fault-Tolerant Sliding Mode Controller for a 4 Degree of Freedom Robotic Manipulator.....	1347
<i>Duc Thien Tran, Thien Quang Nguyen</i>	
Remove the Motion Artifacts in fNIRS Using Neural Networks	1359
<i>Ruisen Huang, Dalin Yang, Keum-Shik Hong</i>	
Automatically Estimated Meals in Model Predictive Control-Moving Horizon Estimation Control Strategy.....	1367
<i>Máté Siket, Kamilla Novák, Levente Kovács, György Eigner</i>	
Local Sensory Feedback Generates Various Wave Gaits in Multi-Legged Robots Via Embodied Sensorimotor Interaction	1379
<i>Yuichi Ambe, Shinya Aoi, Masashi Konyo, Satoshi Tadokoro</i>	
Object-Oriented Navigation with a Multi-Layer Semantic Map	1386
<i>Kai-Tai Song, Li-Ren Kang</i>	
A Brief Review on Behavior Recognition Based on Key Points of Human Skeleton and Eye Gaze to Prevent Human Error.....	1396
<i>Nurani Lathifah, Hsien-I Lin</i>	
Adaptive Coverage Control for Dynamic Pattern Generation	1404
<i>Keerati Fungtammasan, Yang Bai, Mikhail Svinin, Fumitoshi Matsuno, Evgeni Magid, Jackrit Suthakorn</i>	
Modified E ³ Exploration Algorithm for Unknown Environments with Obstacles	1413
<i>Ilya Mavrin, Tatyana Tsoty, Evgeni Magid</i>	
Random Finite Set Based Safe Landing Zone Detection and Tracking.....	1441
<i>Hyeon-Mun Jeong, Woo-Cheol Lee, Han-Lim Choi</i>	
A Background-Aware Tracker with Multi-Features Correlation Filters	1451
<i>Sixian Zhang, Yi Yang, Meng Zhang, Pengbo Mi, Wei Wang</i>	
Robust Fuzzy Active Contour Model for Mixed Noise Image Segmentation	1457
<i>Meng Zhang, Yi Yang, Sixian Zhang, Pengbo Mi, Erqi Zhang</i>	
A Novel Feature Selection Method Based on Ambiguity Distribution	1462
<i>Wei Li, Deqiang Han, Xiaojing Fan, Yi Yang</i>	
A Study of the Human-Robot Synchronous Control Based on IMU and EMG Sensing of an Upper Limb	1474
<i>Chih-Jer Lin, Hsin-Yu Peng</i>	

Adaptive Fuzzy Control of Autonomous Underwater Vehicle Via Performance Observer and Disturbance Observer	1493
<i>Yun-Xiang Zhai, Hong-Du Wang, Mansour Karkoub, Ming Li</i>	
Extended State Observer Based Robust Model Predictive Control for Autonomous Underwater Vehicle	1499
<i>Feng Gao, Hong-Du Wang, Mansour Karkoub, Ming Li</i>	
A Compliant-Rigid Underwater Manipulator for Enhanced Safety and Precision Performance.....	1505
<i>Hamed Toubar, Umer Hameed Shah, Irfan Hussain</i>	
Medical Diagnosis of Lung Diseases Using Data Mining Techniques from Iris Images: A Retrospective Controlled Study.....	1537
<i>Seong-Hwan Choi, Miso S. Park, Seong-Il Park, Ho-Ryong Yoo, Hyun-Jung Park</i>	
A Preliminary Study on Extracting the Collarette Features from the Iris Images	1541
<i>Miso S. Park, Sungjoon Park, Wang-Jung Hur, Seong-Il Park, Hyun-Jung Park, Ho-Ryong Yoo</i>	
A Study of the Iris Characteristics of Dementia Patients Using the Askeye Iris Analysis AI Solution	1544
<i>Min Heo, Miso S. Park, Seong-Hwan Choi, Seong-Il Park, Jie-Yoon Kang, Ho-Ryong Yoo</i>	
Classification of Six Sound Categories Using Functional Near-Infrared Spectroscopy.....	1553
<i>So-Hyeon Yoo, Keum-Shik Hong</i>	
Influence of tACS/tDCS on Resting State Effective Connectivity in the Frontal Cortex: An Functional Near-Infrared Spectroscopy Study	1563
<i>Usman Ghafoor, M. N. Afzal Khan, Dalin Yang, Keum-Shik Hong</i>	
Blind Source Separation of Transcranial Direct Current Stimulation from Simultaneous Electroencephalograph Measurement.....	1569
<i>Dalin Yang, Ruisen Huang, Usman Ghafoor, M. N. Afzal Khan, Keum-Shik Hong</i>	
A Sleep Stage Classification Method Using Deep Learning by Extracting the Characteristics of Frequency Domain from a Single EEG Channel.....	1575
<i>Min-Kyoung Kang, Keum-Shik Hong</i>	
Investigating the Effect of Acupuncture Treatment on MCI Patients Using Classification Techniques.....	1583
<i>M. N. Afzal Khan, Usman Ghafoor, Keum-Shik Hong</i>	
Cognitive Response to Nitric Oxide on Aging People	1589
<i>Agatha Elisabet, Dalin Yang, Min-Kyoung Kang, Keum-Shik Hong</i>	
Design of Multichannel Portable for Functional Near-Infrared Spectroscopy / Electroencephalography Hybrid System	1593
<i>M. Y. S. Hasim, Shokirov Bobur, Keum Shik Hong</i>	
Adaptive Control for Stochastic Nonlinear Systems with Time-Varying Powers and Unknown Covariance.....	1602
<i>Jiabao Gu, Wuquan Li</i>	
Social Optima in Linear Quadratic Mean Field Control with Heterogeneous Agents.....	1607
<i>Tinghan Xie, Bing-Chang Wang</i>	
Optimal Control for Discrete-Time Markov Jump Linear Systems with Multiple Input Channels.....	1615
<i>Di Zhang, Yuan-Hua Ni</i>	

Fault Tolerant Control Applied to Drum Boiler by Virtual Actuator	1628
<i>Pietro Camilo, Alain Segundo Potts</i>	
Classical and Quantum Passive Systems.....	1634
<i>Shan Ma</i>	
Vibration Control of a Flexible Varying-Length Beam Attached to a Translating Base Under an Unknown Boundary Disturbance	1642
<i>Phuong-Tung Pham, Quoc-Chi Nguyen, Keum-Shik Hong</i>	
Nonsingular Hierarchical Trajectory Tracking Control for Miniature Helicopter Considering Perturbation Caused by Attitude Error and Nonlinear Coupling.....	1648
<i>Ce Liu</i>	
Three Frequency-Limited Balanced Truncation Algorithms: A Comparison and Three Families of Extensions	1654
<i>Umair Zulfiqar, Xin Du, Qiuyan Song, Victor Sreeram</i>	
Spatially Modulated Sparse Code Multiple Access in Uplink Mine Communications	1660
<i>Wei Meng, Yidong Gu, Jianjun Bao, Zhen Lian, Zhengmin Kong, Weijun Yin</i>	
A SOSM Control Algorithm by Using Fixed-Time Adaptive Fuzzy Technique	1682
<i>Xin Li, Shihong Ding, Keqi Mei, Li Ma, Wei Xing Zheng</i>	
A ϵ -Nash Equilibrium in Convex Strategy Set in Linear Dynamic Games with Input Time-Delay	1688
<i>Jingyi Zhao, Daijun Liu, Yaowei Fu, Yifei Zhang, Wenya Zhou</i>	
Sequential Covariance Intersection Based on the Upper Bound of Correlation Coefficient	1704
<i>Chengzi Li, Qian Yang, Yiwen Cao, Hongxia Rao, Yong Xu</i>	
Optimal Tracking Control for Multi-Player Non-Zero-Sum Games of Continuous-Time Linear Systems with Unknown Dynamics.....	1713
<i>Zhen Huang, Yidong Tu, Shuping He</i>	
UAV Swarming Flight Guidance for Multi-UAV Configuration.....	1718
<i>Sayid Achmad Munthahar, Rianto Adhy Sasongko, Seno Sahisnu Rawikara</i>	
Data Based Identification of Byzantine Robots for Collective Decision Making	1724
<i>Vyacheslav Petrenko, Fariza Tebueva, Sergey Ryabtsev, Vladimir Antonov, Igor Struchkov</i>	
Event-Triggered Distributed Exponential H_∞ Observers Design for Discrete-Time Nonlinear Systems Over Wireless Sensor Networks.....	1730
<i>Abdul Basit, Muhammad Tufail, Keum-Shik Hong, Muhammad Rehan, Ijaz Ahmed</i>	
Event-Triggered Leaderless Robust Consensus Control of Nonlinear Multi-Agents Under Disturbances	1736
<i>Ijaz Ahmed, Muhammad Rehan, Keum-Shik Hong, Abdul Basit</i>	
Control of Positive Systems and Cancer Chemotherapy	1747
<i>Zbigniew Bartosiewicz</i>	
Nonlinear Model Predictive Control with Non-Equidistant Discretization Time Grids for Rotary Cranes.....	1753

Abstract—This paper presents empirical research on the implementation of dynamic programming to a classic and established nonlinear dynamical model of an F-8 aircraft's longitudinal motion. The model has been frequently used as a case study in academic environments for nonlinear dynamics and optimal controls topics. On the other hand, dynamic programming gives an exact solution to an optimal control problem. Hence, it can be used to benchmark other optimization methods. Before implementing dynamic programming, we first investigated the primary behavior of an F-8 aircraft's dynamical model. The existing dynamical model is inherently stable in the presence of a non-zero initial attack angle as long as its value is less or equal to 31.6° . However, the stall angle of an F-8 aircraft is reported as 23.5° , which is lower than 31.6° . Therefore, in this paper, an initial attack angle that is larger than 31.6° becomes one of our concerns. Our results show that dynamic programming can be used to regulate the states of an F-8 aircraft's dynamical model even when the applied initial attack angle is larger than 31.6° . We also compare our dynamic programming implementation to the MATLAB pattern search method and sequential quadratic programming. While the first gives results that are very similar to dynamic programming, the latter fails to provide satisfactory results.

Index Terms—Optimal control, aerospace, nonlinear control systems, reinforcement learning

I. INTRODUCTION

In 1977, Garrard and Jordan [1] designed a nonlinear control technique for an F-8 aircraft's longitudinal motion. The controller's goal is to stabilize the attack angle, pitch angle, and pitch rate of an F-8 Crusader aircraft in the presence of a non-zero initial attack angle. The work was started with the derivation of a nonlinear dynamical model of the longitudinal motion of an F-8 aircraft and followed by a control design based on the derived model.

In 1984, Desrochers and Al-Jaar [2] presented the reduced order of Garrard's model and designed an optimal controller based on this simplified model. In 1992, Banks and Mhana [3] also applied an optimal controller to Garrard's model, which had been linearized by using the standard Riccati's method. In 1993, Kaya and Noakes [4], [5] applied a time-optimal control

to Garrard's model. Their method is a computer algorithm that works for both linear and nonlinear systems.

More recent and advanced works, as in [6]–[8], applied bifurcation theory to the nonlinear dynamical model of an F-8 aircraft's longitudinal motion. In both works, the dynamical model was re-derived. A profound analytic exploration of the nonlinear dynamical model of an F-8 aircraft's longitudinal motion can be found in these two works.

Since the F-8 aircraft's dynamical model is nonlinear, we can conclude that the general approach is typically linearizing the model around its equilibrium point and then using the linearized model for control design purposes. However, this linear control may have limited performance. Garrard and Jordan [1] reported that such a linear controller performed well when the initial attack angle was less than 29.3° . Further, Garrard and Jordan also proposed an optimization technique to design a quadratic and a cubic controller. These controllers were nonlinear and were reported to perform well for wider initial attack angles, which were 30.7° and 34.7° , respectively.

Even though the longitudinal motion of an F-8 aircraft has been very well studied, to the best of the author's knowledge, no work presents dynamic programming implementation on an F-8 aircraft's longitudinal motion. The closest work that we can find is in [3], where the analytic solution to the optimal control problem is found through solving Riccati's equation. Therefore, we decided to apply dynamic programming to Garrard's model. Dynamic programming has been well recommended as a benchmark controller since it visits all possible state combinations and provides an exact solution to an optimal control problem [9].

In this paper, we use the YADPF function package to implement dynamic programming into the dynamical model expressed in (1). The YADPF function package is an in-house software package created with MATLAB for deterministic dynamic programming. Further details on the YADPF function package can be found in [10].

This paper is divided into three major sections. In the first

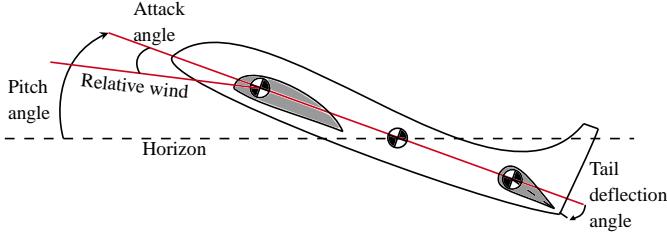

Fig. 1. Attack angle (x_1) pitch angle (x_2) and tail deflection angle (u) of an aircraft.

section, we re-state the dynamical model of an F-8 aircraft's longitudinal motion that has been derived in [1]. Here, we add several numerical analysis to some inherent properties of the selected dynamical model. In second section, we apply dynamic programming to generate optimal control policies to stabilize the aircraft in the presence of a non-zero initial attack angle. Finally, we present the conclusion and the future plan of our work in the last section of the paper.

II. DYNAMICAL MODEL

As previously mentioned, Garrard and Jordan [1] proposed a nonlinear dynamical model to govern the longitudinal motion of an F-8 aircraft system. The dynamical model has three state variables ($\mathbf{x} = [x_1 \ x_2 \ x_3]$) and one input variable (u). It is written as follows.

$$\begin{aligned}\dot{x}_1(t) &= -0.877x_1(t) + x_3(t) - 0.088x_1(t)x_3(t) \\ &\quad + 0.47x_1(t)^2 - 0.019x_2(t)^2 - x_1(t)^2x_3(t) \\ &\quad + 3.846x_1(t)^3 - 0.215u(t) + 0.28x_1(t)^2u(t) \\ &\quad + 0.47x_1(t)u(t)^2 + 0.63u(t)^3 \\ \dot{x}_2(t) &= x_3(t) \\ \dot{x}_3(t) &= -4.208x_1(t) - 0.396x_3(t) - 0.47x_1(t)^2 \\ &\quad - 3.564x_1(t)^3 - 20.967u(t) + 6.265x_1(t)^2u(t) \\ &\quad + 46x_1(t)u(t)^2 + 61.4u(t)^3\end{aligned}\quad (1)$$

Here, x_1 is the angle of attack, x_2 is the pitch angle, x_3 is the pitch rate and u is the tail deflection angle that acts as the control input (see Fig. 1). All unit are in degrees or radians. The dynamical model in (1) has cubic non-linearity. When no input is applied ($u = 0$), it has one real equilibrium point which is located at the origin: $\mathbf{x} = [0 \ 0 \ 0]$.

Proofing the stability of the dynamical model in (1) is difficult since finding the Lyapunov function that can conclude its stability is not straightforward. Therefore, to proof that (1) has a stable equilibrium at the origin, we calculate the Jacobian matrix around the equilibrium point (the origin) numerically by using a perturbation method (see matrix A in (2)). After that, we can get the eigenvalues of this Jacobian matrix, which are $\lambda_1 = -0.6365 + 2.0372i$, $\lambda_2 = -0.6365 - 2.0372i$, and $\lambda_3 = 0$. Since the real parts of all eigenvalues are negative, this equilibrium point is a stable equilibrium point.

$$A = \begin{pmatrix} -0.877 & 0 & 1 \\ 0 & 0 & 1 \\ -4.208 & 0 & -0.396 \end{pmatrix} \quad (2)$$

Since our main interest is the response of the aircraft for non-zero initial attack angle ($x_1(0)$), we simulated the dynamical model in (1) numerically for several different initial attack angles. Simply put, we performed brute-force sweeps from $x_1(0) = 10^\circ$ to $x_1(0) = 40^\circ$ with a step of 0.1° . As a result, we found that the dynamical model started to diverge when $x_1(0) > 31.6^\circ$. In practice, this describes the region of attraction of the dynamical model expressed in (1). However, a complete region of attraction must include all state variables.

III. DYNAMIC PROGRAMMING IMPLEMENTATION

This section is divided into two sections. In the first section, we formulate the optimal control problem that we want to solve. In the second section, we provide the simulation results.

A. Optimal Control Problem Formulation

Dynamic programming implementation requires state and input discretization. Thus, it may suffer from the curse of dimensionality. For each experiment, we must find boundaries and resolutions for the discretization such that they fit into the available memory of the computer that we use for this research, which is a Xeon-E5-2699-v3 computer with 256 GB of memory.

We formulate the discrete optimal control problem as follows.

$$\min_{u_k \in U_k} \frac{1}{N+1} \sum_{k=0}^N \left\{ \left[\frac{x_{1,k}}{\bar{x}} \right]^{2r} + \left[\frac{x_{2,k}}{\bar{x}} \right]^{2r} + \left[\frac{x_{3,k}}{\bar{x}} \right]^{2r} \right\} \quad (3)$$

such that

$$\begin{aligned}x_{1,k+1} &= [-0.877x_{1,k} + x_{3,k} - 0.088x_{1,k}x_{3,k} \\ &\quad + 0.47x_{1,k}^2 - 0.019x_{2,k}^2 - x_{1,k}^2x_{3,k} \\ &\quad + 3.846x_{1,k}^3 - 0.215u_k + 0.28x_{1,k}^2u_k \\ &\quad + 0.47x_{1,k}u_k^2 + 0.63u_k^3] \Delta t + x_{1,k} \\ x_{2,k+1} &= x_{3,k} \Delta t + x_{2,k} \\ x_{3,k+1} &= [-4.208x_{1,k} - 0.396x_{3,k} - 0.47x_{1,k}^2 \\ &\quad - 3.564x_{1,k}^3 - 20.967u_k + 6.265x_{1,k}^2u_k \\ &\quad + 46x_{1,k}u_k^2 + 61.4u_k^3] \Delta t + x_{3,k} \\ x_{1,k} \in X_{1,k} &= \{a, a + \Delta x, \dots, b\} \\ x_{2,k} \in X_{2,k} &= \{c, c + \Delta x, \dots, d\} \\ x_{3,k} \in X_{3,k} &= \{e, e + \Delta x, \dots, f\} \\ u_k \in U_k &= \{-3^\circ, (-3 + \Delta u)^\circ, \dots, 3^\circ\} \\ k &= 0, 1, \dots, N+1\end{aligned} \quad (4)$$

In (3), we want to minimize an objective function whose constraints are defined in (4). This objective function is based on [11] where it is used to minimize water-level deviation of open-channel flows. The similar objective function is also used in [12], [13] where it is used to minimize pressure fluctuation during water-hammer problems. In principal, this objective function minimizes the temporal fluctuations of state variables x_1 , x_2 , and x_3 . Minimizing input variable u is not necessary. Moreover, this objective function is actually similar to the

work of Garrard and Jordan [1]. However, in their work, they also applied minimization to the input variable as well.

One important thing that we would like to emphasize is that the optimal control problem defined in (3) to (4) is not a trivial task since the objective function itself is an implicit function of the decision variables. Thus, finding the gradient of such an objective function requires solving the system dynamics first. As a result, it is challenging to derive the analytical equation of the gradient of the objective function.

There are two control parameters introduced in (3). The first one is \bar{x} , which is the tolerable deviation from the origin. The second parameter is r , which is any positive integer (unitless). We selected $\bar{x} = 0.01$ radians and $r = 2$ for faster response. Larger r or smaller \bar{x} gives insignificant effects to the improvements to the response time.

Further, the state discretization interval is given by Δx , and the time discretization interval is given by Δt . We applied $\Delta t = 0.5$ seconds. The horizon length is given by $N + 1$, where $N = 20$. This is because the simulation was run for 10 seconds. As for the input boundaries, they were set similar to the work by Kaya and Noakes [5]. Since a time-optimal control was not our goal, we did not apply switching actions of two extreme values for the input.

Moreover, to avoid insufficient memory problems, the state boundaries (a to f) are set as tight as possible. This is done heuristically. For the upper boundaries, they were selected such that their locations were slightly above the maximum state values. For the lower boundaries, they were selected such that their locations were slightly below the minimum state values.

B. Simulation Results

For this paper, we simulated four different initial attack angles: $x_1(0) = 20.0^\circ$, $x_1(0) = 22.9^\circ$, $x_1(0) = 26.7^\circ$, and $x_1(0) = 32.0^\circ$ by using dynamic programming, MATLAB pattern search, and MATLAB sequential quadratic programming (SQP). The reason we selected MATLAB pattern search is because it is a global optimization method and it does not require the derivative of the objective function [14], [15]. As for the SQP, we supplied MATLAB with the derivative of the objective function which was calculated numerically by using the Complex-Step Derivative Approximation (CSDA) method [16]. We have made our MATLAB implementations for pattern search and SQP available online in [17].

During the simulations with dynamic programming, we had to readjust the state and input variable intervals according to Table I since we encountered insufficient memory space problem. The results are shown in Fig. 2 to Fig. 5. Both dynamic programming and MATLAB pattern search successfully generate input variable that can regulate the state variables.

As we can see from Fig. 5, since the input is constrained ($|u| < 3^\circ$), the pitch angle reaches about -80° when the initial attack angle is 32.0° . Thus, we did not test for larger initial attack angles. In Table II and Table III, we present the absolute terminal distance of each state variable to its origin, for dynamic programming and pattern search, respectively. We do not include the result from the SQP since we expect smooth

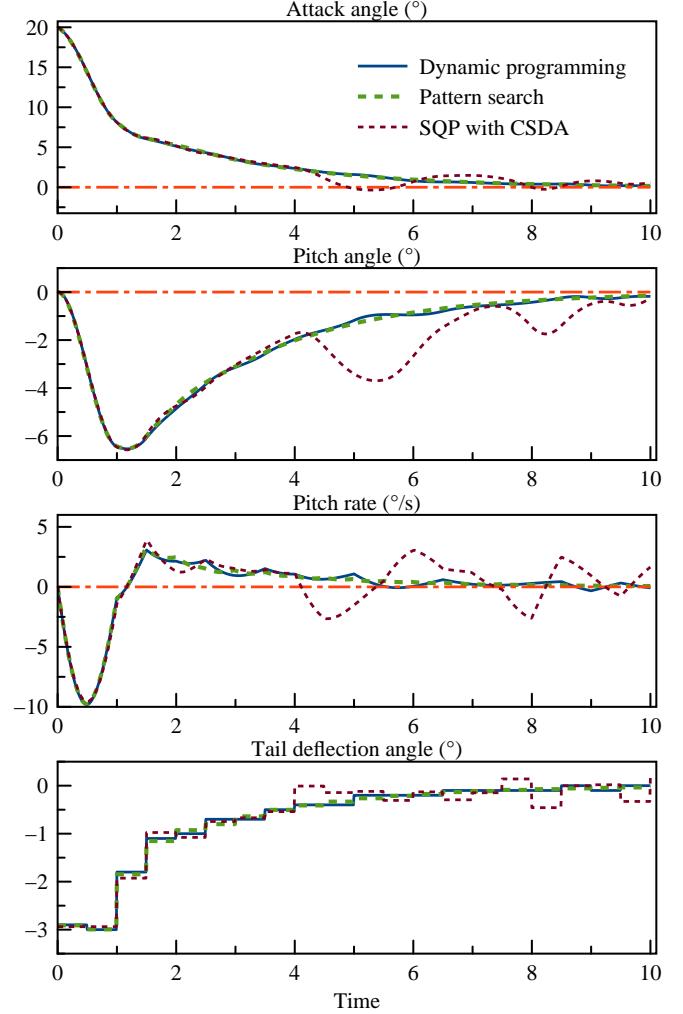

Fig. 2. The aircraft's stabilizing action when $x_1(0) = 20.0^\circ$.

TABLE I
DISCRETIZED STATE AND INPUT RESOLUTIONS

$x_1(0)$	Δx	Δu	Δt
20.0°	0.002 radians	0.1°	0.5 seconds
22.9°	0.002 radians	0.1°	0.5 seconds
26.7°	0.002 radians	0.5°	0.5 seconds
32.0°	0.004 radians	0.5°	0.5 seconds

state trajectories considering the selected objective function. The maximum absolute terminal distance after the ten-second simulations is less than seven degrees.

Moreover, the generated state trajectories are relatively smooth because of the selected objective function. From the state trajectories generated by the MATLAB pattern search, we can see that zero-crossing only occurs at most once. More fluctuations appear in the state trajectories generated by dynamic programming, which is caused by the discretization process. The resolution for input variables needs to be higher. However, this requires more memory space beyond our computing system's specification.

We cannot compare our results with the work of Garrard

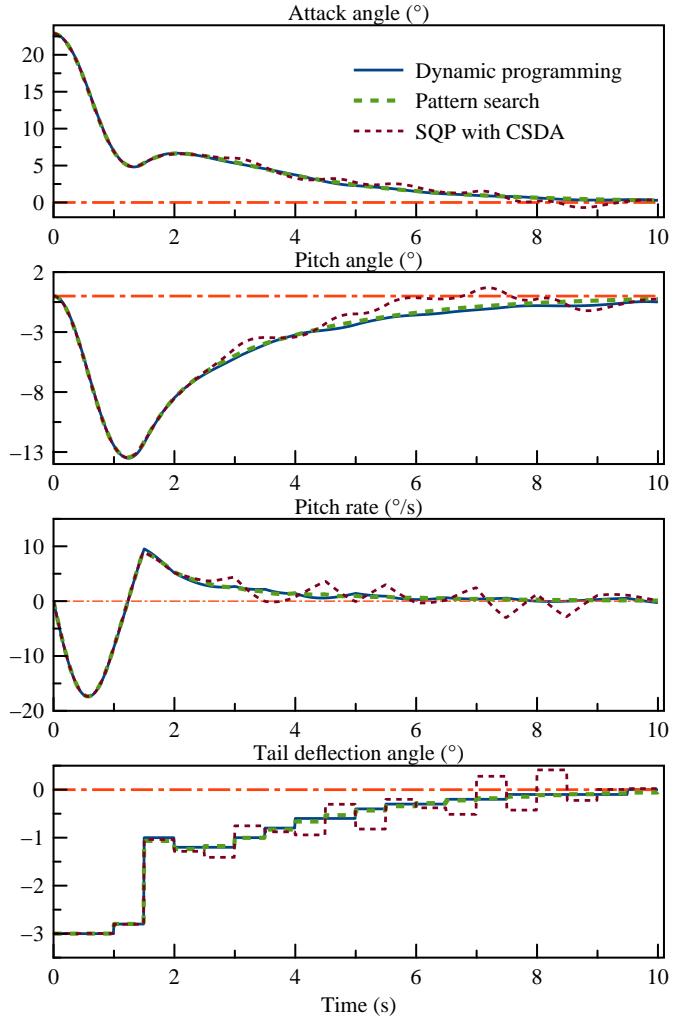

Fig. 3. The aircraft's stabilizing action when $x_1(0) = 22.9^\circ$.

TABLE II
ABSOLUTE TERMINAL DISTANCE FROM THE ORIGIN WITH DYNAMIC PROGRAMMING

$x_1(0)$	$ x_1(10) $	$ x_2(10) $	$ x_3(10) $
20.0°	0.1554°	0.1815°	0.0892°
22.9°	0.2809°	0.4917°	0.2693°
26.7°	0.6252°	0.0189°	0.4630°
32.0°	5.3055°	3.5105°	1.2110°

and Jordan since, in our work, the controller is an open-loop controller and the input is bounded differently. As with the work of Kaya and Noakes, they aimed for a time-optimal control. Implementing a time-optimal control with dynamic programming is not straightforward since dynamic programming requires a predefined time horizon.

IV. CONCLUSION AND FUTURE WORK

We have briefly explored the dynamical model of an F-8 aircraft's longitudinal motion in the presence of a non-zero initial attack angle. The dynamical model used in this paper is inherently stable around its equilibrium point. However, it

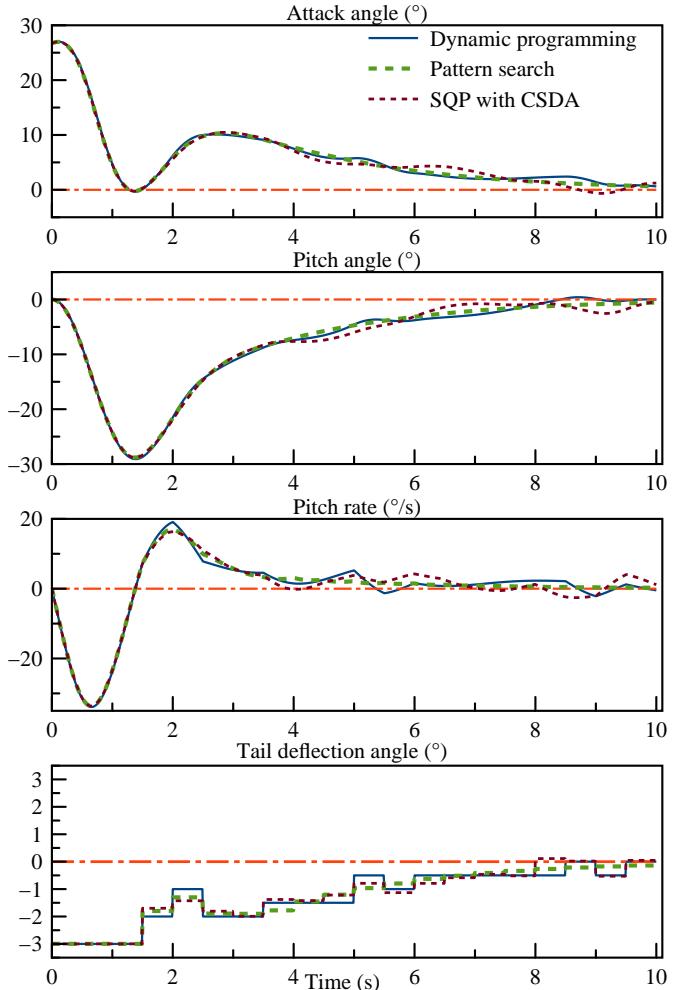

Fig. 4. The aircraft's stabilizing action when $x_1(0) = 26.7^\circ$.

TABLE III
ABSOLUTE TERMINAL DISTANCE FROM THE ORIGIN WITH MATLAB PATTERN SEARCH

$x_1(0)$	$ x_1(10) $	$ x_2(10) $	$ x_3(10) $
20.0°	0.1641°	0.1485°	0.0683°
22.9°	0.2669°	0.2424°	0.1089°
26.7°	0.6293°	0.5539°	0.2772°
32.0°	3.6255°	3.6920°	1.1044°

has a finite region of attraction that requires further analysis to define its boundary of attraction. We have not yet done such analysis in this paper and it will be an interesting topic for us to investigate in the future.

As for dynamic programming implementation, the results demonstrate that dynamic programming can solve the stabilization problem of an F-8 aircraft's longitudinal motion. Additionally, the selected objective function that minimizes temporal fluctuation suits the real-world applications since it generates smooth state trajectories that are physically realizable.

Overall, the results from dynamic programming are very

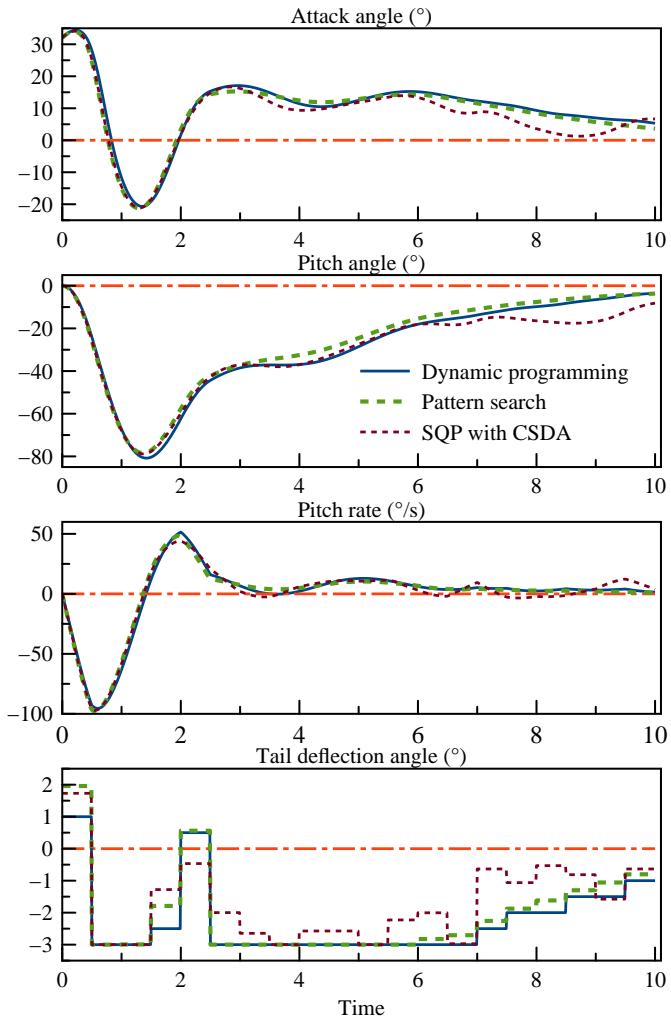

Fig. 5. The aircraft's stabilizing action when $x_1(0) = 32.0^\circ$.

similar to the MATLAB pattern search method. Thus, we can ensure that the MATLAB pattern search method can also be used as a benchmark for optimal control design for the dynamical model stated in (1). Such an information is very beneficial since MATLAB pattern search is faster and requires less memory space when compared to dynamic programming. Yet, MATLAB pattern search successfully gives the exact solution that is similar to dynamic programming.

In this current work, the input variable, the tail deflection angle, is generated as a piecewise-constant function. This is because our in-house dynamic programming function package, the YADPF, applies zero-order-hold (ZOH) operations when discretizing the input variable. Additionally, the proposed dynamical does not include the tail's dynamic. Since a piecewise-constant function is not realizable in actual physical systems, a piecewise-linear function can be used in the future. This may require an additional state variable or modifications in the YADPF function package. Another interesting future work is to find the analytic derivative of the objective function for a successful SQP implementation.
