Tomy Irawan (2019021201)

### TELECOMMUNICATION TOWERS CONSTRUCTION PROCESS AT SITAC BUILD TO SUIT DEPARTMENT IN PT PROFESIONAL TELEKOMUNIKASI INDONESIA (PROTELINDO)

*The professional work practice that I do at PT Professional Telekomunikasi Indonesia (Protelindo) is actually a job that I am currently working on since 2008 (14 years). In this opportunity, I will give an overview of the company where I work, the business that we run in the company, and also about my position and role in the work organization, particularly about the target and achievement of the telecommunication tower construction projects that we are working on throughout 2021.*

*In my current position as General Manager in the Site Acquisition Build to Suit (SITAC BTS Dept.) Department, I am primarily responsible for controlling and monitoring all telecommunication tower construction activities since the Work Order (WO) / Surat Perintah Kerja (SPK) was issued by our customers/clients (Cellular Operators) until the telecommunication tower construction work is completed and can be used by our clients and the supporting documents for billing are declared complete.*

*In addition to controlling and monitoring project activities, I am also required to provide reports and presentations to management, clients and all stakeholders who have the most interest in the activities and progress of our telecommunications tower construction projects. This is very important because all stakeholders need accurate and actual information from the projects we run.*

**Keywords : construction, telecommunication tower, Site Acquisition, Build to Suit, SITAC, BTS, Cellular Operators, work order, project, stakeholders.**
