Pasar Ciputat is an economic area who located in the South Tangerang City, as we know that's a landmark because of high density activities. Pasar Ciputat have an important role as a support media in economic development, because many people depend on Pasar Ciputat. But the high activity that occurs in the Pasar Ciputat has an impact on other activities, as we know is a pedestrians. Pasar Ciputat has a path of pedestrian who located on Jl. Aria Putra and Jl. Dewi Sartika has switched functions as another activity used by street things, illegal parking, and others. Furthermore, in terms of the physical condition of the pedestrian pathway, it does not proper the standards of comfort and safety. So the tendency of pedestrians is a not to use the existing pedestrian pathway and choose to walk on the shoulders of roads and main street causes inconvenience and insecurity. So the purpose of this research is to find out the functional changes that occur in the pedestrian path on Jl. Aria Putra and Jl. Dewi Sartika and reviewing again the appropriateness of pedestrian pathways with the comfort and safety standards needed to use existing regulatory guidelines, and theories that discuss the comfort and safety needed on pedestrian pathways.
