### ***Site analysis and the process of new buildings, renovations and landscape architecture in the Ciawi KM 45 Rest Area, Bogor***

The intern doing professionally worked in an architecture berreau named PT. US&P Architects. The intern was trusted by PT. US&P Architects to design a Rest Area at KM 45, Ciawi, Bogor. The intern got experience about practice works as an architect. The intern contributed on almost all of the building projects that were included on rest area, Ciawi. The intern had also learnt unique ways to design and analysis a plan. The intern directly experienced how to plan an architectural design. The Planning process started from analyzing macro & micro part of the site. Then, the intern designed as a way to renovate infearible building and planed an open green space (landscape). Looking at the masterplan, the berreau had already, analyzed the site's macro and micro part, such as buildings arrangement, circulations, local value, accessibility, the client's need, and the needs of the society who live around the site. Every, works that the intern accepted had responsibility and deadline. Consequently it gave experience to commite with realty and goals. During works, there was always had a revision which gained experience and made the intern realized about every fault he made. In order to prosecute, The intern need to be more focused and careful in every details of works. So, the intern gets learning and experience about the world of architecture, starting from the theories or knowledge that have been practiced getting in the lecture process to the actual work process obtained in the work process of the profession that has been practiced.

*Keywords: Designing, Macro, Micro, Renovation, Landscape*
