### **Perancangan Website untuk Mengunggah Konten Suara**

*Website Design for Voice Content Upload is a internship report that discusses the process of designing and developing a website to facilitate users to upload voice content that has been done manually by sending voice content data to the IT division team via electronic mail. The purpose of designing this website is to improve work efficiency in uploading voice content. With this website, users can upload suara content independently so there is no need to send data via electronic mail to the IT department team. In this internship, student use a web application development approach that uses the Laravel framework and focuses on aspects of security and user comfort. The result of this website design is a platform that can facilitate users in uploading suara content from preachers and motivators for needs during a one-month period.*
