

ABSTRACT

DESIGNING A COMPANY PROFILE WEBSITE AT PT. WAHANA ERA SEJAHTERA

PT.Wahana Era Sejahtera which was established in 2006, this company started in the field of telecommunications network infrastructure and cellular telecommunications towers. PT.Wahana Era Sejahtera has a vision to be the best provider company in providing technology, service and management solutions for customers and a mission to provide the best solutions in an inovative,professional, efficient and effective approach to customer satisfaction that focuses on network solution performance, development and deployment of telecommunications networks that aim to assist customers in obtaining telecommunications network services that are precise, fast, safe and accurate. PT.Wahana Era Sejahtera has a company profile website that wants to be developed on the user interface side in order to attract customers, investors, business partners and the wider community. This Professional Work (KP) aims to develop and implement practical knowledge of website programming by being placed in a back-end position in designing a company profile website. The results and conclusions of the design of this company profile website use a waterfall method that facilitates the flow of design, and the website is made using Native HTML, CSS, Javascript. This company profile website is expected to attract customers, investors, business partners and the wider community.
