INVENTORY APPLICATION DEVELOPMENT IN THE COMPANY PT. TIRTA SURYA RAYA

Inventory Application Development in PT. Tirta Surya Raya is a Professional Work report that discusses the application development process to make it easier for users to enter data that has so far been done manually or with Excel. The purpose of developing this application is to increase work time efficiency. With this application, users can enter data accurately and quickly, so there is no need to create Tables or enter data manually. In this professional work, the practitioner uses an inventory application approach using the electron framework. The result of the development of this application is an application that can facilitate users in inputting goods data according to their needs.

Keywords: Application, Inventory, Information.
