The website-based ordering system for this bookstore is called the As-Saalam shop, which is located in the central printing area of Tangerang. And this shop is a Yasin bookstore that sells goods on the spot where customers can buy directly and also customers can order using social media by doing Via chat. The information system for ordering this shop has goals, benefits and looks for solutions so that existing problems can be resolved. With that, a website-based ordering application system was created which later this application was divided into users and admins in order to make it easier for customers to collect customer order data and get product information. The author makes observations to collect information through the website and so on related to the research topic that the writer is doing. Furthermore, there is a sales system method that is also built using the programming language PHP, JavaScript and the MySQL database. design using the Unifield Modeling Language (UML) is a method in visual modeling that is used as a means of designing object-oriented systems.

Keywords: Website, shop, ordering, sales, sales reports
