*SHIPPING AGENCY APPLICATION DESIGN AT PT APLIKASI
PENDEKAR NUSANTARA*

Practitioners carry out Professional Work (KP) at PT. The purpose of making this application is to solve problems that often occur in shipping agencies in terms of service and accuracy of data that is obtained and processed digitally, no longer manually, where data errors often occur which cause fatal errors in shipping so that ships cannot sail, by using the application what we will make with the FGTA framework will make it easier in terms of documentation and certification in shipping that must be fulfilled before the ship sails. Using a web-based application will make it easier in daily work because it can be accessed anywhere and anytime as long as there is an internet network, everyone can access it easily and quickly so that company productivity will grow massively and data security is maintained because it is already digital.

Keywords: Shipping Agency Applications, Web Based, System Analysis, Information Technology, Digital documents,
