The growth of art has been decreasing and the cultural identity is faded, as new generation comes, we should remember where we started and know our cultural identity. The city of Tangerang Selatan is a well-known growing city and as a growing city there should be a remembrance of the past. Therefore, there should be a place where we could focus and learn about art and culture about the city, not only that, but also able to give a good example to both the environment and the community by creating an approach of green architecture for this project. This final project is to create and design an art and cultural gallery that can accommodate the visitors and users properly. This design would also create a better place for artists to create and able to display their work of art, whether its paintings, performances, ceramics, and many more.

Keywords: *Gallery, Arts and Culture, Green Architecture*
