Bintaro is one of the independent cities developed by PT. Jaya Real Property, formerly known as PT. Bintaro Jaya. Bintaro was first built in 1979. The area prioritizes comfortable housing (Real Estate) as well as adequate supporting facilities such as hospitals, schools, the economy, basic needs, etc. Due to the rapid development of infrastructure, many people who work in urban areas are looking for a place to live in the suburbs so they can avoid the density of urban areas. In the midst of their busy activities, many Bintaro people often take the time to continue doing sports activities, so that they can maintain their immunity and increase their stamina in carrying out quite busy activities. These factors made the writer choose the site to be used as a sports center which has a size of ± 1.5 HA. The selected site is addressed at Jl. Bintaro Jaya Boulevard, Parigi, Kec. Pd. Aren, Kota Tangerang Selatan, Banten 15227. The location on this road was chosen because the access is passed by the Bintaro Loop, which many people use as a place to exercise and is also close to other supporting facilities. Besides that, Bintaro is one of the areas chosen to be used as a sports venue compared to the surrounding area. However, due to the location of the site which does not allow it to be used as a minimum for wide-span buildings, the wide-span buildings will apply the deconstruction method.

Keywords: Sport center, Deconstruction, Bintaro Jaya.
