*This research was conducted with the aim of testing whether there is influence from the Coupon, Rating, Maturity, and Solvency variabels on the banking sector's Bond Yields for 2017-2021. This study uses a quantitative method with the research object of the banking sector registered with the Indonesian Central Securities Depository for 2017-2021. Data from this study used secondary data taken from the official website of the Indonesian Central Securities Depository (KSEI) ([www.ksei.co.id](http://www.ksei.co.id)) as a determinant of samples and data. Researchers also use the website of PT. Indonesian Securities Rating Agency (<https://pefindo.com/>) to see the rating of each corporate bond under study. The data collection technique in this study used a purposive sampling technique, there were previously 33 banking companies with 111 bonds, which became 8 companies and 41 bonds. The data analysis technique used in this study is panel data regression analysis using Panel Data Estimation (chow test, Hausman test, and Lagrange multiplier test), Classical Assumption Test, and Hypothesis Test (coefficient of determination test, t test, and F test) with using Eviews 10 software. The results of this study show that Coupons and Ratings have a significant effect on Bond Yields, while Maturity and Solvability have no effect on Bond Yields.*

**Keywords:** *Coupon, Rating, Maturity, Solvency and Bond Yield*
