The framing of adultery and cohabitation issues by online news sites can affect legal discourse and public understanding of these regulations. So that research on these issues is considered important and interesting because it is believed to provide perspectives on how the media, in this case online news sites pay attention to legal and legislative aspects in framing this issue. The purpose of this study is to determine the comparison of framing between Republika.co.id and Magdalene.co on the controversial issue of adultery and cohabitation articles of the RKUHP. Both news sites were chosen because so far they are known as media with a representation of certain values, Republika.co.id with Islamic values, while Magdalene.co with women's issues. For this reason, this study uses the framing research method with the Entman formula. The Entman formula can explain how to provide definitions, explanations, evaluations and recommendations for events. A number of concepts that will be used as a knife for the analysis of this research include: journalism, gender perspective, media function, media reality construction and framing. The period for determining the unit of analysis is limited to January 2021 to December 2022. The study's findings suggest a difference in framing. Republika.co.id framed the articles of adultery and cohabitation as moral issues related to religion, morals and law. Meanwhile, Magdalene.co framed the article on adultery and cohabitation as public issues that tend to place women as victims and who bear a heavier burden.
