Technological developments have become increasingly sophisticated. However, this research created a Web-based questionnaire that was used for Alumni students at Pembangunan Jaya University using the Tracer Study method. This study aims to carry out a Follow-Up Survey or Alumni Survey Study to analyze data on alumni for opportunities to work. The research method uses a quantitative method in which you can see the data of respondents who have worked on the questionnaire. The questionnaire is made Web-based. The results obtained from this research were to make a questionnaire which was filled in by the alumni of Pembangunan Jaya University and then after filling in the data it could be seen by the lecturer. The conclusion obtained from this research is that tracer studies can be used to obtain information in assessing relevance for Alumni of Pembangunan Jaya University.

Keywords: Tracer Study, Technology, Information, Alumni, Pembangunan Jaya University
